MEMBER PLUS

Member Plus

Product Requirements Document — V3.0

Problem · Solution · Users · Features · Technical Specification
Fully in English | Salla Partner App

This document covers the complete product and technical specification for the Member Plus — a Salla Partner App enabling merchants to run automated paid membership programs for their store customers. It is the single source of truth for all product decisions, technical architecture, and development requirements.

Section 1 — Problem Statement

> **>This section answers one question: Why andand .<**

1.0 The Full Picture — Read This First

Imagine a merchant selling on Salla. They have customers who buy from them repeatedly — they trust the merchant, love the products, and spend thousands of SAR every year. But the merchant does not know who they are. They have no way to signal to these customers that they are special. And when they want to offer a discount, they give it to everyone — the loyal buyer and the first-time visitor alike.

This is not neglect on the merchant's part. They simply do not have the tool. Salla gives them excellent selling infrastructure, but not a structured loyalty mechanism that runs automatically.

Member Plus is that tool.

1.1 The Market Reality

Saudi Arabia's e-commerce market is one of the fastest growing in the world — and Salla powers over 60,000 active merchants. These merchants compete fiercely for customer loyalty. The most valuable asset a merchant can own is not a product — it is a repeat customer.

Most Salla merchants have no structured way to build loyalty. They rely on one-off discount campaigns, social media posts, and hope. They have no mechanism to make a customer feel like they belong to something exclusive.

1.2 The Core Problem

Who	The Pain	The Cost
Salla Merchant	No tool to reward loyal customers. Every promotion is open to everyone. Discounts eat margin without building loyalty. Cannot distinguish a 1-time buyer from a 20-time buyer.	High acquisition cost with low repeat rate. Margin pressure from storewide discounts.
Merchant's Customer	No reason to feel special. Best customers get same experience as first-time visitors. No acknowledgment of loyalty. No sense of belonging.	No incentive to choose this store over another. Zero emotional connection to the brand.

1.3 What Merchants Do Today — And Why It Fails

Current Approach	Why It Fails
Storewide discount campaigns	Open to everyone. Trains customers to wait for discounts. Destroys margin. Attracts deal hunters, not loyal buyers.
WhatsApp broadcast lists	Unstructured. No segmentation. Feels like spam. No exclusive value. Everyone gets the same message.
Public coupon codes	Shared publicly. Anyone can use them. The loyal customer gets no advantage over a stranger.
Manual VIP treatment	Not scalable. Inconsistent. Works for 10 customers, completely breaks at 100.

1.4 Why Now

Force	Why It Matters
GCC e-commerce maturity	Customers are experienced online shoppers who expect a relationship with brands they love. The bar has raised.
Salla's scale	60,000+ merchants. Even 1% adoption = significant business. Salla's Recurring Payments API now makes this technically feasible.
Subscription normalization	Saudi customers already pay monthly subscriptions (Netflix, Jahez Plus, Careem Prime). The behavior is established.
No direct competitor on Salla	No app in Salla's App Store currently offers a complete paid membership program. Open market.

Section 2 — Our Solution

This section explains exactly what we are building and how it solves the problem documented in Section 1.

2.0 The Solution in Plain Language

We are building a Salla app that lets merchants say to their loyal customers: "Pay X SAR every month and you get an automatic discount on every order, free shipping, an exclusive monthly gift, early access to new products, and a verified badge marking you as a VIP member."

The merchant configures this once in 5 minutes. After that — everything runs automatically. Coupons are generated, notifications sent, reports delivered, memberships renewed. The merchant does not need to remember anything.

2.1 The Core Insight

The most powerful thing you can do for a merchant is give their best customers a reason to feel special every single month — automatically. A subscription that makes the customer feel like a VIP member of a club, where every benefit arrives without effort and every visit feels personal.

2.2 What We Are Building

A Salla Partner App that enables any Salla merchant to launch a paid membership program for their store customers — without any technical knowledge, without custom development, and without managing a single coupon manually. The merchant configures once. The app handles everything else — forever.

2.3 The Solution in One Sentence Per Person

Person	What We Give Them
The Merchant	A complete membership program that runs itself — turning occasional buyers into loyal paying members who feel valued every month.
The Member	A VIP membership at their favorite store — with real, tangible benefits that arrive automatically every month.
Us (Business)	A SaaS app on Salla's marketplace charging merchants a monthly fee to operate their membership program.

2.4 How It Works

Layer	What Happens
Merchant installs	Configure plan names, prices, benefits. 4 steps. ~8 minutes total.
Merchant promotes	Shares a plans page link we host. Adds it to store navigation.
Customer subscribes	Pays via Salla's native checkout. Credit card. Automatic monthly renewal.
Benefits activate	Discount applied automatically. Free shipping code generated. Monthly gift prepared. Badge appears. All automatic. Zero effort from member.
Every month	New gift coupon generated. Quota resets. Member notified. Merchant gets performance report. Zero effort from anyone.
We charge merchant	Fixed monthly SaaS fee via Salla App Store billing. Salla handles all payment processing.

PAYMENT RULE — NEVER BROKEN: All payments go through Salla. We never handle money directly. We never collect payments. We never store payment details. We respond to Salla webhooks only.

2.5 Our 3 SaaS Plans

Plan	Price	Member Limit	Best For
Starter	79 SAR/month	50 members	Small stores launching first membership
Pro	149 SAR/month	200 members	Growing stores with active customer base
Unlimited	249 SAR/month	Unlimited	Established stores with large loyal following

Section 3 — Target Users & Personas

3.1 Primary User — The Merchant

Dimension	Profile
Who they are	Small to medium Salla store owner. Fashion, beauty, food, accessories, home goods. Running solo or with 1-2 helpers. Annual revenue 200K–2M SAR.
What they want	More repeat customers. Higher order value. Less dependency on discounts. A way to make their best customers feel special.
What they know	Their products and customers. They do not know APIs or webhooks. They should never need to.
Biggest fear	Paying for something that does not work. Complexity they cannot manage. A tool that embarrasses them in front of loyal customers.
Device & language	Desktop browser. Saudi Arabia. Arabic primary.

3.2 Secondary User — The End Customer (Member)

Dimension	Profile
Who they are	Regular customer of a specific Salla store. Already bought 2–5 times. Trusts the brand. Willing to commit if value is clear.
What triggers subscription	Seeing that monthly savings exceed cost: "I spend 300 SAR/month here. 15% discount saves 45 SAR. Membership costs 49 SAR. This pays for itself."
What keeps them subscribed	The monthly gift coupon. When it arrives each month, it reminds them they are a member and creates a reason to shop this month.
What makes them cancel	Forgetting they are a member. Not using benefits. Feeling value has dropped.
Language	Arabic primary. RTL. Bilingual required on all screens.

3.3 Who This Is NOT For

Not For	Why
Large enterprises with technical teams	They can build custom loyalty programs. Our value is simplicity for those who cannot.
Merchants selling one-time products	If customers rarely repurchase, a membership has no audience.
Stores with fewer than 100 monthly visitors	Not enough traffic for meaningful member numbers. ROI on app cost is questionable.

Section 4 — Market Opportunity

4.1 The Addressable Market on Salla

Metric	Estimate	Basis
Total active Salla merchants	60,000+	Salla's publicly stated number
Merchants in repeat-purchase categories	~35,000	Fashion, beauty, food, home — ~60% of merchants
Merchants with enough traffic	~15,000	~40% of category-relevant merchants
Target Year 1	500–1,000 merchants	Conservative 3–7% of addressable market
Revenue at 1,000 merchants on Pro	1.78M SAR/year	At 149 SAR/month average

4.2 Competitive Landscape

Competitor	What They Offer	Our Advantage
No direct Salla competitor	No app currently offers complete paid membership with automated benefits.	First mover. Full-featured. Purpose-built for Salla.
Generic loyalty point apps	Points-based. No subscription. No monthly gift. No automatic delivery.	Tangible monthly benefits. Subscription creates recurring merchant revenue.
Custom-built solutions	Large merchants build their own. Costs 50K–200K SAR.	90% of capability at a fraction of the cost. No dev team needed.
Regional loyalty platforms	Not integrated with Salla. Merchant manages two systems.	Native to Salla. Benefits apply automatically through Salla's infrastructure.

Section 5 — Goals & Success Metrics

5.1 Product Goals

Goal	Success Looks Like	Timeframe
Merchant activation	Installs, completes setup, goes live within 24 hours	Day 1
First member	Gets first paying member within 7 days of going live	Week 1
Merchant retention	Stays subscribed to our app 6+ months	Month 6
Member retention	Average member stays subscribed 3+ months	Ongoing
Merchant ROI	Membership revenue exceeds app cost within month 1	Month 1
Zero manual effort	Merchant does nothing between 1st and 28th of each month	Always

5.2 Business Metrics — Month 6 Targets

Metric	Target	Why It Matters
Total active merchants	100+	Primary revenue driver
Monthly Recurring Revenue	15,000+ SAR	Business health
Merchant churn rate	< 5% / month	Product failing if higher
Avg time to first member	< 5 days after going live	Measures onboarding quality
Avg members per merchant	20+	Measures merchant success
Setup completion rate	> 70% of installs	Measures wizard quality

Section 6 — User Stories

6.1 Merchant Stories

ID	As a merchant I want to...	So that...	Priority
M-01	Set up my membership program in under 15 minutes	I can launch without technical help	Must have
M-02	See member count and revenue clearly in one screen	I know if the program is worth the app cost	Must have
M-03	Know which members are at risk before they cancel	I can act before losing them	Must have
M-04	Send a message to a specific member	I can handle complaints without leaving the dashboard	Must have
M-05	Configure next month's gift coupon easily	My members always receive a relevant gift	Must have
M-06	See and copy my plans page link instantly	I can promote my program without searching for the URL	Must have
M-07	Deactivate a plan without harming existing members	I can make changes without breaking trust	Must have
M-08	Preview exactly what my members see	I understand their experience and can explain it	Must have
M-09	Get automated alerts when something needs attention	I never miss critical moments like gift configuration deadlines	Must have
M-10	Raise or lower price without disrupting existing members	I can adjust pricing as the business grows	Must have
M-11	Export all member data anytime	I own my data and can use it outside the app if needed	Must have
M-12	See which benefits members use most	I improve what matters most to retention	Should have

6.2 Member Stories

ID	As a member I want to...	So that...	Priority
C-01	See all my benefits clearly in one place	I know what I get and how to use each benefit	Must have
C-02	Copy my free shipping code in one tap	I do not search for the code every time I shop	Must have
C-03	Know exactly when my monthly gift arrives	I have something to look forward to each month	Must have
C-04	See how much I have saved since joining	I feel the membership is worth what I pay	Must have
C-05	See my membership badge on every store page	I feel recognized and valued by the store	Must have
C-06	Access my dashboard by tapping my badge	I never need to search for the dashboard URL	Must have
C-07	Understand what happens if my payment fails	I do not panic if there is a card issue	Must have
C-08	See a savings summary after each order	I immediately see the value of my membership after every purchase	Must have
C-09	See exclusive products before non-members	I feel ahead and rewarded for my loyalty	Should have

Section 7 — Solution Architecture

7.1 Three-Party Model

Party	Role	Payment Flow
Us (the App)	Build and operate the membership platform. Published on Salla App Store.	Collect SaaS fee from merchant via Salla App Store billing. Salla manages all payment processing.
Merchant	Install. Configure plans. Promote to customers. Configure monthly gift.	Collect membership fees from end customers via Salla Recurring Payments.
End Customer	Subscribe to membership. Use benefits on every purchase.	Pay merchant monthly via Salla checkout. Credit card. Auto-renewal.

7.2 The 6 Benefits — Overview

#	Benefit	How It Works	Quota
B1	Automatic Discount	Applied at Salla checkout via Special Offer. Zero action from member.	Unlimited
B2	Member-Only Price	Different lower price shown exclusively to members on specific products.	Unlimited
B3	Free Shipping	Personal coupon code. Copy from dashboard. Enter at checkout.	Monthly quota
B4	Monthly Gift Coupon	Personal exclusive coupon. 1 use. Expires end of month. No rollover.	1 per month
B5	Early Product Access	Products hidden from public — visible only to member tier.	Binary access
B6	Identity Badge	Visible on every store page. Tap opens mini-dashboard with codes and savings.	Always active

Section 8 — Merchant Experience

8.1 Install & Trial (7 Days)

Phase	What Happens
Merchant installs	Salla handles authorization. app.store.authorize webhook fires. We create merchant account. 7-day trial starts automatically.
Welcome email sent	One email. One link. Dashboard link only. Nothing else.
Day 0	Merchant opens dashboard. Setup wizard begins. Coming soon widget activates after step 1.
Days 1–6	Zero emails from us. Interest counter in dashboard does the motivational work silently.
Day 5	Email: "Trial ends in 2 days. [N] customers expressed interest in your membership."
Day 6	Email: "Last day. [N] waiting. Program launches automatically tomorrow if setup complete."
Day 7 — billing	Salla charges automatically. If setup complete: plans page live + interest registrants notified. If not: plans page stays locked.

8.2 Setup Wizard (4 Steps, ~8 Minutes)

Smart defaults pre-filled for every field. Merchant confirms or adjusts. They never face a blank form.

Step	Merchant Configures	Smart Default
Welcome	Welcome screen: app logo, store name, 3-item checklist, 5-min estimate. Single CTA to begin setup.	No defaults — informational
Step 1	Prices & billing cycle per plan. Plan names (AR+EN). Prices. Featured badge toggle.	Silver: 49 SAR monthly | Gold: 99 SAR monthly
Step 2	Plan names (AR + EN). Monthly prices for Silver and Gold.	Silver / 49 SAR | Gold / 99 SAR
Step 3	Discount % per tier. Free shipping uses per month per tier.	Silver: 10% / 2 uses | Gold: 15% / 4 uses
Step 4	Monthly gift for Gold: type, value, description (AR + EN).	No default. Context shown: "Members who get a monthly gift stay 3× longer."
Step 5	Review all settings. Two consent checkboxes.	Cannot skip either checkbox.

8.3 Live Operations (Monthly Cycle)

When	What Happens Automatically
28th of each month	Scheduler generates all gift coupons and free shipping coupons for next month.
1st of each month	Members notified their new gift is ready. Merchant receives monthly performance report.
3 days before month end	If next month gift not configured: urgent alert to merchant via email + SMS.
Member renews	Quota resets. New gift generated. Member notified. Merchant sees renewal in dashboard.
Member payment fails	3-day grace period starts. Benefits continue. Member notified immediately.
Member cancels	Benefits continue to end of paid period. Member notified with exact end date.

8.4 Merchant Dashboard — All Screens

Screen	Key Information
Main Overview	Member count by tier. Revenue. Churn. At-risk count. ROI: "App costs 149 SAR. Members generate X SAR. Net: Y SAR." Time-filtered: 7d / 30d / 3m / 12m.
Today's Focus Card	ONE single contextual action. Priority: gift warning > grace expiry > plan limit > zero members.
Member List	Searchable. Filterable by tier and status. Name, tier, status, subscribed price, renewal date, total savings.
Member Profile	Full history: all charges, all benefits used, all orders. Total savings. Message this member.
Analytics	Revenue trend, member growth, churn timing, tier comparison, benefit effectiveness.
Gift Management	Configure current/next month gift. Redemption history. Next generation date always visible.
Activity Log	Chronological feed of all events. Filterable. Exportable CSV.
Settings	Plan names, prices, benefits, notifications, branding, billing, data export.

Section 9 — Member Experience

9.1 Discovery — How a Customer Learns About Membership

Entry Point	What They See
Store header (non-member)	>Subtle teaser pill: "and / Membership available". Tap opens brief benefits sheet + "Join from 49 SAR/month".<
Product page	Below price: "Members get 15% off — join now"
Direct link	Merchant shares plans page link on Instagram, WhatsApp, store navigation

9.2 Plans Page

Element	Detail
ROI Calculator	"How much do you spend here per month?" Shows estimated annual savings vs membership cost. Labeled as estimate.
Tier Cards	Silver and Gold side by side. Gold highlighted. Benefits listed. Price. Subscribe button.
Subscribe Button	Goes directly to Salla's native checkout. Salla processes the recurring subscription payment.

3 states of the plans page based on who is visiting:
(1) **Already active member:** App Snippet detects active membership → shows "You are already a Gold Member — active until [date]" + dashboard link. Subscribe button hidden completely. Double subscription is impossible from UX and Salla also blocks it natively.
(2) **Former member (expired/cancelled):** Plans page shows "Welcome back — you were a Gold Member. Rejoin now and get your first gift immediately." Personalized CTA.
(3) **New visitor:** Full plans page with ROI calculator, tier cards, and subscribe buttons.

9.3 Welcome Moment (fires once after first subscription)

Content	Detail
Tier badge	>"and / Gold Member" — first time they see it<
All 6 benefits	Listed clearly with brief instructions for each
First gift coupon	Already generated and visible immediately
Merchant's message	Personal welcome in Arabic and English — merchant writes this
One CTA only	>" and and / Go to my membership dashboard" — one button, nothing else<

9.4 Member Dashboard

3 permanent entry points to the member dashboard:
(1) Tapping the tier badge in the store header → opens salla-sheet → link to full dashboard.
> (2) "and / My Membership" link injected in Salla's profile dropdown menu.<
(3) Link in the order confirmation App Snippet after every purchase.
The member should never need to search for their dashboard.

Section	What Member Sees
Header	>Tier badge. Renewal: " 12 and / In 12 days". Total savings this month.<
Free Shipping	"2 of 4 uses left". Progress bar. Code + one-tap copy. Reset date.
Monthly Gift	"Your [gift name]: [description]". Code + one-tap copy. Days until expiry countdown.
Next Gift Date	Always visible. New members: timing explained clearly.
Order History	Every order placed as member with savings per order.
Grace Period Warning	Amber banner: "Payment failed — update card within N days to keep your benefits."

9.5 Member Onboarding — First 7 Days

Day	Arabic Message	English Message
Day 1	Your 15% discount applies automatically on your next order.	Your 15% discount applies automatically on your next order.
Day 3	You have 4 free shipping uses this month. Your code: GOLD-A3XK.	You have 4 free shipping uses this month. Code: GOLD-A3XK.
Day 7	Your monthly gift is ready in your membership dashboard. Your next gift arrives May 1.	Your gift is ready now in your membership dashboard. Your next gift arrives May 1.

Section 10 — The 6 Member Benefits

Benefit 1 — Automatic Member Discount

Aspect	Detail
What it is	Percentage discount applied automatically at checkout for all qualifying orders. No action from member.
Salla tool	Special Offer API — offer_type: percentage — customer_groups: [plan.salla_group_id]
Quota	Unlimited. Every order during membership period.
Member sees — product page	>" and 15% / Your 15% discount applies at checkout — approx 85 SAR"<
Member sees — confirmation	>"and 45 SAR Member / You saved 45 SAR with your member discount"<
On benefit value change	PUT Salla Special Offer. Takes effect IMMEDIATELY. Merchant warned in dashboard.

Benefit 2 — Member-Only Price

Aspect	Detail
What it is	A completely different price visible only to members on specific products. Not a checkout discount.
Salla tool	Special Offer API — offer_type: special_price — customer_groups: [plan.salla_group_id]
Member sees	>" and: 89 SAR / Your member price: 89 SAR" with 130 SAR crossed out. Handled natively by Salla.<
Configuration	Optional. Per product. Set anytime after launch. Merchant configures per product in Salla.

Benefit 3 — Free Shipping

Aspect	Detail
What it is	Personal monthly coupon giving free shipping. Hard monthly quota. Code required at checkout.
Platform constraint	CANNOT auto-apply. Manual code entry always required. Salla platform limitation. Designed around.
Member sees — dashboard	"2 of 4 left — resets May 1" + code + one-tap copy.
Member sees — cart	App Snippet shows code banner above cart totals with one-tap copy.
Mid-month quota change	Applies from next 28th generation. Current month coupon unchanged. Merchant warned.

Benefit 4 — Monthly Gift Coupon

Aspect	Detail
What it is	Personal exclusive coupon. 1 use per month. Expires last day of month. No rollover. Most important retention driver.
Member sees	>": 25% and — 31 and / Your gift: 25% off accessories — expires May 31" + code + one-tap copy.<
Name	Merchant-customizable. Default: Monthly Gift / Monthly Gift.
If not configured by 28th	Skip generation. Member sees "Gift being prepared". Merchant gets urgent alert: email + SMS.

Benefit 5 — Early Product Access

Aspect	Detail
What it is	Products hidden from public — visible only to specific tier before public launch.
Correct tier member	Sees product + "Available to you before everyone else"
Wrong tier visiting URL	>" — and / This is for Gold Members — upgrade to access" + upgrade CTA<
Non-member visiting URL	"For members only — join now" + plans page CTA
Hidden from listing	For non-members and wrong tier: product simply absent. No gap. No indication.

Benefit 6 — Member Identity Badge

Aspect	Detail
What it is	Tier badge on every store page. Tap opens mini-dashboard sheet with codes and savings.
Badge text	>Always bilingual: "and / Gold Member". Both. Always. Separated by /.<
Member taps badge	salla-sheet opens: tier, renewal date, savings, shipping code (one-tap copy), gift code (one-tap copy), dashboard link.
Non-member area	Subtle teaser pill → teaser salla-sheet → plans page CTA.
Grace period	Same badge + amber dot. Sheet shows payment warning as first item.

Section 11 — Bilingual Standard (Arabic + English)

Arabic is PRIMARY. English is SECONDARY. Both ALWAYS present on every user-facing screen. Never toggle-only. Never one language without the other.

Rule	Detail
Primary / secondary	Arabic leads. English always present beside or below. RTL is the default direction.
Tier badge	>"and / Gold Member" — Both. Always. Separated by /.<
Coupon codes	Always LTR regardless of page direction. Codes are identifiers, not language.
Prices	Arabic: "99 SAR" — English: "99 SAR". One utility function for all formatting.
Merchant inputs	Every user-facing text field requires both AR and EN. Neither is optional. Dashboard enforces.
Buttons	Single language per button. Match page direction.
Error messages	Match page language. Never mix languages in one message.
Emails	Arabic section first. Separator line. English section second. Never one language only.

Tone of Voice

Context	Arabic	English
Merchant success	>and 50 and — and 4,950 SAR .<	You hit 50 members — your program generates 4,950 SAR/month.
Merchant alert	>Monthly Gift — 28 .<	Next month's gift not configured — set it up before April 28.
Merchant error	Something went wrong on our end — your data is safe.	Something went wrong on our end — your data is safe.
Member welcome	> — and .<	Welcome, Ahmed — you are now a Gold Member.
Member benefit ready	> — 25% and.<	Your monthly gift is ready — 25% off accessories.

Section 12 — Salla Platform Constraints

Confirmed from docs.salla.dev. Every architectural decision is built around these. Read before writing any code.

#	Constraint	Our Solution
C-01	Cancel Subscription API: IMMEDIATE only. No end-of-period option.	Manage timing in our DB. Call Salla Cancel only on the actual end date — never earlier.
C-02	Subscription parameters cannot be modified once created.	Create a NEW Salla subscription product per price point. Price lock via separate products.
C-03	Coupon at checkout locks subscription price permanently at discounted rate.	Warn merchant: "Any checkout discount becomes the permanent price for that member."
C-04	Free shipping cannot auto-apply. Manual code entry always required.	One-tap copy in dashboard + code surfaced in cart via App Snippet.
C-05	Special Offer updates take effect immediately — cannot delay.	Merchant warned clearly. Recommend month-start changes only.
C-06	Coupon usage_count not restorable via API after order cancel.	Track our own counter in DB. Restore on order.cancelled webhook.
C-07	subscriptions.read_write scope must be requested from Salla Support separately.	Contact Salla Support before development starts. This is the first task.
C-08	WE run the renewal scheduler — Salla does NOT auto-renew.	Build and operate our own idempotent scheduler.
C-09	Customer Group member cap: UNKNOWN from docs.	Developer MUST test 1000+ members on demo store. ALL group code BLOCKED until this test is done.
C-10	Once cancelled — Salla subscription cannot be reactivated.	Cancelled member must create a brand new subscription. Communicate clearly.

Section 13 — Technical Architecture

Decision	Specification
API versioning	/api/v1/... from day one. 6-month deprecation notice before breaking changes.
Environments	3: dev / staging / prod. Each with own Salla Partner Portal registration (separate client ID, secret, webhook URL).
Uptime SLA	99.5% target. Single region V1. Upgrade at month 6 if revenue justifies.
Database	PostgreSQL. Row-level locking for state transitions. Parameterized queries only.
Scheduler	Separate process from web server. Idempotent jobs. Health monitoring + alerts required.
Caching	Plans page: 5-min CDN. Dashboard: no cache (private data). Snippet JS: 24h CDN versioned URL.
App Snippet	CDN versioned. Canary to 10% of merchants first. Each component in try-catch. Kill switch via API response.
Snippet performance	<30KB gzipped. 1 API call on page load max. SessionStorage for member state (5-min TTL).
Mobile	OUT OF SCOPE. Desktop only. No responsive design.
Token refresh	Refresh OAuth before every Salla API call if expiring within 10 min. One shared utility function used everywhere.

Section 14 — Database Schema (11 Tables)

Developer builds schema exactly from these specifications. All fields, types, and constraints are defined. No guessing required.

14.1 merchants

Field	Type	Notes
id	UUID PK	
salla_store_id	BIGINT UNIQUE NOT NULL	Never changes
access_token	TEXT NOT NULL	Encrypted AES-256
refresh_token	TEXT NOT NULL	Encrypted AES-256. Never log.
token_expires_at	TIMESTAMP	Refresh before every API call if within 10 min
status	ENUM	trial | active | suspended | cancelled. Default: trial.
trial_ends_at	TIMESTAMP	trial_started_at + 7 days
activated_at	TIMESTAMP	Set on app.subscription.started
setup_completed	BOOLEAN DEFAULT FALSE	Blocks plans page activation
setup_step	INT DEFAULT 0	0–5. Last completed step.
recurring_enabled	BOOLEAN DEFAULT FALSE	Set after enable_recurring_payment API succeeds
our_plan	ENUM	starter | pro | unlimited
member_count	INT DEFAULT 0	Cached. Updated by trigger.

14.2 membership_plans

Field	Type	Notes
id	UUID PK	
merchant_id	UUID FK→merchants	
tier	ENUM	silver | gold
display_name_ar	VARCHAR(100) NOT NULL	>Merchant-configurable. e.g. and <
display_name_en	VARCHAR(100) NOT NULL	Merchant-configurable. e.g. Gold Member
price	DECIMAL(10,2) NOT NULL	Current price for new subscribers
status	ENUM	active | paused | deactivating | deactivated
discount_pct	DECIMAL(5,2) NOT NULL	Gold must be > Silver. Enforced on save.
free_shipping_uses	INT NOT NULL	Gold must be >= Silver.
gift_name_ar	VARCHAR(100)	Default: Monthly Gift
gift_name_en	VARCHAR(100)	Default: Monthly Gift
salla_offer_id	BIGINT	Salla Special Offer ID for auto-discount
salla_group_id	BIGINT NOT NULL	Salla Customer Group ID

14.3 plan_price_versions — price lock architecture

Each member references a specific price version. Multiple versions active simultaneously per plan. This is the technical foundation of price lock.

Field	Type	Notes
id	UUID PK	
plan_id	UUID FK→membership_plans	
price	DECIMAL(10,2) NOT NULL	Price at this version
salla_product_id	BIGINT NOT NULL	Salla recurring product for this price point
salla_product_slug	VARCHAR(255) NOT NULL	e.g. gold-99-sar
effective_from	TIMESTAMP NOT NULL	
effective_to	TIMESTAMP	NULL = currently active

14.4 members

Field	Type	Notes
id	UUID PK	
merchant_id	UUID FK→merchants	
plan_id	UUID FK→membership_plans	
price_version_id	UUID FK→plan_price_versions	Locked at subscription. Never changes.
salla_customer_id	BIGINT NOT NULL	Permanent Salla customer ID
salla_subscription_id	VARCHAR(255) UNIQUE NOT NULL	Their Salla Recurring Payment subscription
status	ENUM	active | grace_period | cancelled | expired | complimentary

subscribed_price	DECIMAL(10,2) NOT NULL	For verification against Salla charges
current_period_end	TIMESTAMP NOT NULL	KEY: when benefits stop. When we call Salla Cancel.
grace_period_ends_at	TIMESTAMP	NOW()+3 days when payment fails
next_renewal_at	TIMESTAMP	Scheduled renewal charge date
is_at_risk	BOOLEAN DEFAULT FALSE	No orders in 45+ days
total_saved_sar	DECIMAL(10,2) DEFAULT 0	Running total
free_shipping_used	INT DEFAULT 0	OUR counter. Not Salla's.
free_shipping_quota	INT NOT NULL	From plan at coupon generation time

14.5 gift_coupons

Field	Type	Notes
id	UUID PK	
member_id / merchant_id / plan_id	UUID FKs	
month	DATE NOT NULL	e.g. 2026-05-01. UNIQUE with member_id.
coupon_code	VARCHAR(100)	The code member copies at checkout
gift_type	ENUM	pct_all | pct_category | fixed | free_product
gift_description_ar / en	VARCHAR(255)	What member sees in dashboard
status	ENUM	pending | generated | used | expired | failed
expires_at	TIMESTAMP NOT NULL	Last day of month at 23:59:59
attempts	INT DEFAULT 0	Max 3 retries

14.6 free_shipping_coupons

Field	Type	Notes
id	UUID PK	
member_id / merchant_id	UUID FKs	
month	DATE NOT NULL	UNIQUE with member_id.
coupon_code	VARCHAR(100)	Scoped to this member's customer ID only
quota	INT NOT NULL	Max uses allowed
used_count	INT DEFAULT 0	OUR counter. Source of truth for dashboard.
status	ENUM	active | exhausted | expired | deactivated
expires_at	TIMESTAMP NOT NULL	Last day of month

14.7 webhook_events — idempotency

Every webhook stored BEFORE processing. salla_event_id UNIQUE constraint prevents double processing. If INSERT conflict: already processed — return 200 immediately.

Field	Type	Notes
id	UUID PK	
event_type	VARCHAR(100) NOT NULL	e.g. subscription.created
salla_event_id	VARCHAR(255) UNIQUE	UNIQUE constraint = deduplication mechanism
merchant_id	UUID FK→merchants	
payload	JSONB NOT NULL	Full raw payload. Never delete.
status	ENUM	received | processing | processed | failed | skipped
attempts	INT DEFAULT 0	
error_message	TEXT	For debugging

14.8 interest_registrations — coming soon widget

Zero personal data collected by us. Customer identity read silently from Salla via Twilight SDK. One tap. No form. No fields.

Field	Type	Notes
id	UUID PK	
merchant_id	UUID FK	
salla_customer_id	BIGINT NOT NULL	From Twilight SDK salla.auth.customer.id
clicked_at	TIMESTAMP NOT NULL	
notified_at	TIMESTAMP	When launch notification sent
subscribed_at	TIMESTAMP	If they became a paying member

14.9 benefit_events — dispute investigation

Field	Type	Notes

id	UUID PK	
member_id / merchant_id	UUID FKs	
salla_order_id	BIGINT	
event_type	ENUM	discount_applied | shipping_coupon_used | gift_coupon_used | member_price_applied | benefit_not_applied
amount_saved	DECIMAL(10,2)	
reason_not_applied	TEXT	If not applied: why. For merchant investigation.
created_at	TIMESTAMP	Populated from order.created webhook

14.10 activity_log

Field	Type	Notes
id	UUID PK	
merchant_id	UUID FK	
event_type	VARCHAR(100) NOT NULL	member.joined | member.cancelled | member.payment_failed | benefit.discount_applied | benefit.shipping_used | benefit.gift_used | coupon.generated | plan.benefit_changed
member_id	UUID FK (optional)	
metadata	JSONB	Event-specific details
created_at	TIMESTAMP	

14.11 scheduled_jobs

Field	Type	Notes
id	UUID PK	
job_type	VARCHAR(100) NOT NULL	generate_monthly_coupons | renewal_charge | grace_period_expiry | remove_from_group | group_health_check
merchant_id / member_id	UUID FKs	
scheduled_for	TIMESTAMP NOT NULL	
status	ENUM	pending | running | completed | failed | skipped
attempts / max_attempts	INT	Default max: 3
error_message	TEXT	Last failure reason

Section 15 — State Machines

All state transitions use DB row-level locking (SELECT...FOR UPDATE). Guard conditions checked after acquiring lock. Never rely on application-level checks alone.

15.1 Member Status

From	To	Trigger	Guard	Side Effects
active	grace_period	subscription.charge.failed	status===active	Set grace_period_ends_at=NOW()+3d. Create expiry job. Notify member.
grace_period	active	subscription.charge.succeeded	status===grace_period	Clear ends_at. Cancel expiry job. Notify member resolved.
grace_period	expired	grace_period_expiry job fires	status===grace_period AND ends_at<=NOW()	Remove from Salla Group. Call Salla Cancel. Set expired. Notify member.
active	cancelled	subscription.cancelled webhook	status===active	Set cancelled_at. Keep in group. Create remove_from_group job for period_end.
cancelled	expired	remove_from_group job fires	status===cancelled AND period_end<=NOW()	Remove from group. Call Salla Cancel. Deactivate shipping coupon. Set expired.

15.2 Merchant Status

From	To	Trigger	Side Effects
trial	active (setup done)	app.subscription.started + setup_completed=true	Activate plans page. Notify interest registrants. Send merchant live email.
trial	active (not done)	app.subscription.started + setup_completed=false	Billing started. Plans page stays locked. Prompt merchant to complete setup.
active	suspended	Billing fails OR store suspended	Pause coupon generation. Keep groups. Alert merchant urgent.
suspended	active	Payment resolves	Resume jobs. Generate missed coupons. Notify merchant.
any	cancelled	app.subscription.canceled/expired	Full offboarding: cancel all members, notify all, remove groups, export data.

15.3 Plan Status

From	To	Trigger	Side Effects
active	paused	Merchant confirms pause	Hide from plans page. Salla product inactive. Existing members unaffected.
paused	active	Merchant reactivates	Show on plans page. Salla product active.
active	deactivating	Merchant informed consent	Hide from plans page. Notify tier members. Create remove_from_group per member.
deactivating	deactivated	Last member job completes	Delete Salla Customer Group. Deactivate Salla Special Offer.

Section 16 — Webhook Handling (12 Events)

16.1 Processing Rules

Rule	Detail
Return 200 fast	Return 200 to Salla immediately. Process async via job queue. Never process inline in HTTP handler.
Idempotency	INSERT webhook_events ON CONFLICT DO NOTHING. If rows_affected=0: skip. Only process if INSERT succeeded.
Signature verification	HMAC-SHA256 on raw body BEFORE JSON parsing. crypto.timingSafeEqual(). Reject 401 silently.

16.2 All 12 Events

Event	What We Do
app.store.authorize	Create merchant record. Set trial. Send welcome email (link only).
app.subscription.started	If setup complete: activate plans page + notify interest registrants. If not: prompt merchant.
app.subscription.canceled	Full offboarding immediately.
app.subscription.expired	Same as canceled.
subscription.created	Create member. Add to Customer Group. Set welcome popup flag.
subscription.charge.succeeded	Reset free shipping quota. Generate new gift coupon. Update period dates. Notify member.
subscription.charge.failed	Start 3-day grace period. Create expiry job. Notify member immediately.
subscription.cancelled	Record cancelled_at. Create remove_from_group job for current_period_end.
subscription.updated	Sync subscription data in DB.
order.created	Log to benefit_events. Update total_saved_sar. Update last_order_at.
order.cancelled	Restore free shipping credit: UPDATE used_count=used_count-1 WHERE used_count>0. Atomic.
customer.updated	Refresh cached data. Never store contact info locally.

Section 17 — Scheduler Jobs

Scheduler = separate process. All jobs idempotent. Health monitoring required. Alert on any failure.

17.1 generate_monthly_coupons

Detail	Specification
Runs	28th of month at 09:00 KSA (3 days early — downtime buffer)
Idempotent	UNIQUE (member_id, month) constraint. Check before creating. Skip if generated. Retry if failed.
Rate limit	Max 10 Salla API calls/second. Batch with delay.
Gift not configured	Skip gift + alert merchant (email + SMS). Member sees "Gift being prepared".
Gift coupon params	include_customer_ids:[salla_customer_id], usage_limit_per_user:1, expiry:last_day_of_month_23:59:59
Free shipping params	free_shipping:true, include_customer_ids:[salla_customer_id], usage_limit_per_user:quota
Retry	Per member: 3 attempts, 30-min backoff. After 3 failures: alert admin.
Member notifications	Send on 1st of month. NOT on 28th.

17.2 renewal_charge

Detail	Specification
Created	On subscription.created. scheduled_for=next_renewal_at.
Pre-checks	Refresh OAuth if expiring. Check status===active. Check period dates (idempotency). Lock member row.
Execute	Call Salla Charge Subscription API.
After	Wait for webhook. Do NOT update records before webhook confirms.
Retry	3 attempts, 1 hour apart.

17.3 grace_period_expiry

Detail	Specification
Created	On subscription.charge.failed. scheduled_for=NOW()+3 days.
Cancellable	YES — cancel if subscription.charge.succeeded fires during grace.
Execute	Call Salla Cancel. Remove from group. Set status=expired. Notify member.

17.4 remove_from_group

Detail	Specification
Created	On subscription.cancelled. scheduled_for=current_period_end.
Why we wait	Member paid for full period. We call Salla Cancel only on end date.
Execute	Remove from group. Call Salla Cancel. Deactivate shipping coupon. Set expired. Final notification.

17.5 group_health_check

Detail	Specification
Runs	Daily at 03:00 KSA
Group check	Verify all Customer Groups exist. If missing: recreate + reassign + alert.
Member check	Verify each active member is in correct group. If missing: add back.
At-risk detection	last_order_at < NOW()-45d OR status=grace_period → set is_at_risk=true.
Suspension detection	No webhooks 48h → poll Salla Store Details API.

17.6 Shared Utilities

Utility	Rules
OAuth refresh	If token expires within 10 min: refresh. Update DB atomically. On failure: log, alert, retry in 30 min.
Retry: 5xx / timeout	3× with backoff: 1s, 2s, 4s.
Retry: 429 rate limit	Wait Retry-After header.
Retry: 401	Force refresh token. Retry once.
Retry: 404	Do NOT retry. Log and throw.
Retry: other 4xx	Do NOT retry. Log and throw.

Section 18 — API Contracts

All routes: /api/v1/... — Merchant routes require JWT in HttpOnly cookie. JWT contains merchant_id. Never trust URL params alone for data isolation.

18.1 Merchant Dashboard Endpoints

Endpoint	Method	Notes
POST /webhooks/salla	POST	Verify HMAC. Store in webhook_events. Enqueue job. Return 200.
GET /api/v1/merchant/overview	GET	?period=7d|30d|3m|12m — members, revenue, churn, roi
GET /api/v1/merchant/members	GET	?tier ?status ?search ?sort ?page ?per_page
GET /api/v1/merchant/members/:id	GET	Profile + subscription history + benefit usage + order history
GET /api/v1/merchant/members/:id/benefit-events	GET	Dispute investigation. Filter by order_id.
POST /api/v1/merchant/members/:id/message	POST	{ subject_ar, subject_en, body_ar, body_en }
POST /api/v1/merchant/members/complimentary	POST	{ salla_customer_id, tier, note }
GET /api/v1/merchant/analytics	GET	?period — revenue, growth, retention, churn, tier comparison
GET /api/v1/merchant/activity	GET	?type ?member_id ?from ?to ?page
GET /api/v1/merchant/gift-coupons	GET	?month — config + history + redemption stats
POST /api/v1/merchant/gift-coupons/config	POST	Validate category has active products. Both language fields required.
GET /api/v1/merchant/plans	GET	Silver + Gold + price versions + performance
PUT /api/v1/merchant/plans/:id	PUT	Validate Gold >= Silver on all numeric fields. Updates Salla Special Offer.
POST /api/v1/merchant/plans/:id/price	POST	{ new_price, apply_to_existing } — creates new Salla subscription product
POST /api/v1/merchant/plans/:id/deactivate	POST	Informed consent required first.
POST /api/v1/merchant/plans/:id/pause	POST	Hides from plans page. Salla product set inactive.
GET /api/v1/merchant/export	GET	?type=members|revenue|benefits|coupons — CSV download
GET/PUT /api/v1/merchant/settings	GET/PUT	Plans, notifications, branding, billing.

18.2 Public + Member Endpoints

Endpoint	Method	Notes
GET /api/v1/store/:slug/plans	GET	Public. No auth. CDN cached 5 min.
POST /api/v1/store/:slug/interest	POST	{ salla_customer_id } from Twilight SDK. Rate limit 3/IP/hour. Zero form fields.
POST /api/v1/store/:slug/subscribe	POST	Only if coming_soon=false. Returns { checkout_url }.
GET /api/v1/member/state	GET	Lightweight. App Snippet uses on every page. SessionStorage cached 5 min.
GET /api/v1/member/dashboard	GET	Full member dashboard data.
GET /api/v1/member/history	GET	Orders with savings + coupons used.

Section 19 — App Snippet Injection Points

Runs on every page of every merchant store. Performance: <30KB gzipped. 1 API call on page load max. Each component in try-catch.

Injection Point	Element	3 States Required
Store header	Member badge → tap opens salla-sheet mini-dashboard. Non-member: teaser pill → teaser sheet.	Member / Non-member / Grace period (amber dot)
Homepage (trial only)	Coming soon widget. One button. Zero input. Salla identity via Twilight SDK.	Interested / Not yet / Not logged in
Product page	Discount preview (B1 only) OR member price (B2). Early access banner.	Correct tier / Wrong tier / Non-member
Cart page	Free shipping code banner with one-tap copy if uses remain.	Has uses / Exhausted / Non-member
Order confirmation	Savings summary adapts to what was specifically used on this order.	Per benefit combination used
Profile menu	>"and / My Membership" link injected in Salla profile dropdown.<	Always visible if member
Plans page (Zone 1)	ROI calculator + tier cards + subscribe CTA. Hosted on our server.	Coming soon / Active / Already member

Section 20 — Security

Requirement	Implementation
Webhook verification	HMAC-SHA256 on raw body. crypto.timingSafeEqual(). Reject 401 silently. Verify BEFORE JSON parsing.
Merchant authentication	JWT via HttpOnly + Secure + SameSite=Strict cookie.
Member authentication	Twilight SDK customer.id. Cross-reference with DB. All API calls server-side.
Token encryption	AES-256 at rest. Decrypt only for API calls. Never log tokens.
Data isolation	Every query filters by merchant_id from JWT. Never trust URL params alone.
Rate limiting	POST /interest: 3/IP/hour. Merchant API: 100 req/min.
Never store	Credit cards, passwords, contact info (read from Salla API at notification send time).

Section 21 — Race Conditions

ID	Scenario	Solution
R-01	Salla sends same webhook twice	INSERT webhook_events ON CONFLICT DO NOTHING. rows_affected=0 = skip.
R-02	Renewal fires while member is cancelling	SELECT...FOR UPDATE. Check status after lock. Abort if not active.
R-03	Scheduler runs twice for same month	UNIQUE (member_id, month). Check before creating. Skip if generated.
R-04	Free shipping restored but member used it again	UPDATE used_count=used_count-1 WHERE used_count>0. Atomic.
R-05	Plan deactivating while customer subscribes	Soft gate: status=deactivating. Hard gate: Salla product inactive.
R-06	Multiple grace period jobs created	UNIQUE (member_id, job_type) for pending jobs. Check before creating.

Section 22 — UX Rules for Developer

22.1 Three States — Every Screen

MANDATORY. Every screen, every data section, every interactive element must have all three states. No exceptions.

State	Rule	Example
Empty	Never blank. Explain why. Include CTA if relevant.	Member list: "No members yet. Share your membership link." + Copy button.
Loading	Skeleton screens. Spinner IN button. Disable button on first click.	Member list: 3-4 skeleton rows matching real layout.
Error	Specific message. User error inline. System error as banner. Never lose form data.	"We could not load this data." + Retry button. Form data preserved.

22.2 Coming Soon Widget — Exact Behavior

State	Arabic	English
Not logged in	> and — and <	Membership coming soon — log in to register interest
Logged in — not yet	> and 🔔 <	Membership coming soon 🔔 I am interested
After tap — same widget	>✓ <	✓ We will notify you at launch

22.3 Today's Focus Card — Priority Order

Priority	Condition	Arabic	English
1 — Highest	Gift not configured within 3 days of month end	> Monthly Gift — N <	Configure next month's gift — N days left
2	Members in grace period near expiry	>N and and<	N member(s) may lose access today
3	Plan limit within 10 members	> — <	Approaching limit — upgrade your plan
4	Zero members after 7 days live	> Member <	Add membership link to store navigation
5 — Lowest	All good	> and and<	No action required today

Section 23 — Email & Notification System

23.1 Merchant Emails — All Automated

Email	Trigger	Content
Welcome	Install	Dashboard link only. Nothing else.
Trial day 5	Day 5	"Trial ends in 2 days. [N] customers expressed interest."
Trial day 6	Day 6	"Last day. Launches automatically tomorrow if setup complete."
Live confirmation	Billing + setup done	"Plans page live. [N] customers notified." + plans page URL.
Complete setup	Billing + not done	"Billing started. Complete setup to launch your program."
First member	First subscription	"Your first member just subscribed."
Day 3 — zero	3 days live, 0 members	3 specific promotion tactics.
Day 7 — still zero	7 days live, 0 members	Second set of tactics. Stronger urgency.
Monthly report	1st of month	Members, revenue, churn, benefit usage, next gift status.
Gift warning	3 days before month end, not configured	"Configure gift before [date]. [N] members expecting it."
14-day no login	No login 14 days	Dashboard summary of what happened.
Churn risk	Count drops 2 consecutive months	3 actions to take today.
Our billing fails	App payment fails	"Update payment via Salla."
Milestone 10 members	10th member	"10 members — 990 SAR/month."
Milestone 50 members	50th member	"50 members — [X] SAR/month."
Annual review	12 months active	Full year: members, revenue, savings, top benefit.
Offboarding	Cancelled	"All members notified. Data export attached."

23.2 Member Notifications — All Automated

Notification	Trigger
Day 1 onboarding	subscription.created — discount applies automatically
Day 3 onboarding	3 days after — free shipping code sent
Day 7 onboarding	7 days after — reminder that gift is in dashboard + next month gift date announced
New gift ready	1st of month — new gift available
Renewal confirmed	subscription.charge.succeeded — renewed, new gift ready
Payment failed	subscription.charge.failed — update card within 3 days
Grace period ending	Day 2 of grace — 1 day left
Benefits paused	After grace expires — paused, renew anytime
Early access alert	Merchant adds early access product
Cancellation confirmed	subscription.cancelled — active until [date]
Win-back	30 days after cancel — "You saved [X] SAR — come back?"

23.3 WhatsApp/SMS — 4 Critical Triggers Only

Trigger	Message
Gift not configured, 2 days left	Urgent: configure next month's gift before [date].
Our billing fails	Update payment via Salla. N days remaining.
Member limit reached	Approaching limit. Upgrade to keep growing.
System incident	Our system has an issue. We are working on it.

Section 24 — Edge Cases (All Resolved)

24.1 Member-Side

Case	Resolution
Payment fails on renewal	3-day grace. Benefits continue. After 3 days: group removed, subscription cancelled, status=expired.
Member cancels mid-month	Benefits to period end. Group removal scheduled for period_end.
Free shipping code shared publicly	No risk. Code scoped to include_customer_ids — only that customer can use it.
Gift expires unused	No rollover. New generated next month. Stated clearly on plans page before subscribing.
Member not logged in	Expected behavior. Salla shows regular prices. Snippet shows login prompt.
Member tries to subscribe twice	Plans page shows status. Subscribe hidden. Salla also blocks natively.
Wrong tier visits early access URL	Tier-specific upgrade message + CTA. Not a 404.

24.2 Merchant-Side

Case	Resolution
Salla store suspended	Webhook heartbeat 48h silence → poll Store API → alert.
Merchant downgrades below member count	BLOCKED. Cannot downgrade until within plan limit.
Merchant creates conflicting Salla offer	Daily conflict check. In-dashboard warning. Merchant's decision.
Merchant deletes Customer Group	Daily health check recreates + reassigns + alerts.
Gift configured for empty category	Blocked on save. Validate via Salla Categories API.
Store ownership transfer	Detect via store.updated webhook. Email new owner. 7-day window.
Our system downtime	Salla handles discounts + groups independently. Core benefits survive.

Section 25 — Pre-Launch Checklist

25.1 Developer Tasks

#	Task	Priority
D-01	TEST Customer Group API with 1000+ members on demo store. ALL group code blocked until done.	CRITICAL
D-02	Request subscriptions.read_write scope from Salla Support.	CRITICAL
D-03	Set up 3 Salla app registrations (dev / staging / prod).	CRITICAL
D-04	Implement webhook HMAC verification with timingSafeEqual().	CRITICAL
D-05	Test enable_recurring_payment API on staging demo store.	CRITICAL
D-06	Test Cancel Subscription API exact behavior.	CRITICAL
D-07	Test App Snippet on top 5 popular Salla themes.	CRITICAL
D-08	Test end-to-end subscription flow: plans page → checkout → popup → dashboard.	CRITICAL
D-09	Implement OAuth token refresh utility.	CRITICAL
D-10	Implement Salla API retry utility (one shared function).	CRITICAL
D-11	Configure 3 pricing plans + 7-day trial in Salla Partner Portal.	CRITICAL
D-12	Set up public status page.	Important
D-13	Set up CDN + purge API for plans page.	Important
D-14	Set up scheduler health monitoring + alerts.	Important
D-15	Verify App Snippet <30KB gzipped.	Important

25.2 Business Tasks (Hanem)

#	Task	Priority
H-01	Confirm Salla commission % with Partner team. Adjust pricing if needed.	CRITICAL
H-02	Brief lawyer on Merchant Terms of Service structure.	CRITICAL
H-03	Brief lawyer on Privacy Policy — PDPL compliant.	CRITICAL
H-04	Publish Privacy Policy at a public URL.	CRITICAL
H-05	Publish Terms of Service at a public URL.	CRITICAL
H-06	Review and approve all Arabic copy before handoff.	Important

Section 26 — V1 Scope

Feature	In V1?	Notes
6 member benefits (discount, price, shipping, gift, early access, badge)	YES	All Salla-confirmed
2 tiers: Silver + Gold	YES	3rd tier = V2 upsell
Monthly billing	YES	Annual = V2
7-day free trial	YES	Partner Portal config
Coming soon widget (one tap, zero input)	YES	
4-step setup wizard	YES	
Merchant dashboard (all screens)	YES	
Member dashboard	YES	
App Snippet (7 injection points)	YES	
Email system (18 merchant + 11 member)	YES	
SMS/WhatsApp (4 critical triggers)	YES	
Manual member message (individual)	YES	
Complimentary members	YES	
Dispute investigation (benefit_events)	YES	
ROI view in merchant dashboard	YES	
At-risk member detection	YES	
Member pause subscription	V2	
Bulk member actions	V2	
Referral program	V2	
Promotional pricing (first month free)	V2	
Annual billing — per plan (each plan independent cycle)	YES	Confirmed via Salla API interval_unit. Must test on staging (D-16) before offering.
Third tier	V2	
Mobile responsive design	OUT OF SCOPE	Permanent product decision

Section 28 — Price & Name Change Rules

28.1 Price Changes — All 4 Scenarios

Scenario	Who Gets New Price	Timing	Member Notification
Merchant raises price (default)	New subscribers only. Existing members keep original price forever.	Immediate for new signups. Existing completely unaffected.	None — their price did not change.
Merchant raises price AND applies to existing members	All members — after mandatory 30-day notice period.	Their first renewal after the 30-day window.	Immediate: "Your price will increase from X to Y on [date]. You can cancel penalty-free before then."
Merchant lowers price	ALL members including existing — at next renewal.	Each member's next renewal.	"Good news — your price has been reduced from X to Y effective [renewal date]."
Merchant tries to skip 30-day notice	BLOCKED by system.	Not allowed.	System enforces. Cannot bypass.

Salla constraint: Subscription parameters cannot be modified once created. Price changes require creating a NEW Salla subscription product. Existing members stay on their original Salla product. Both products active simultaneously. Member references price_version_id not plan directly.

New Salla finding: Any coupon or discount applied at checkout locks the subscription price permanently at that discounted rate. Warn merchants: "Any promotional discount at checkout becomes the permanent membership price for that customer."

28.2 What the Merchant Sees When Changing Price

Step	What Happens
Step 1	Merchant types new price and clicks Save.
Step 2	Modal appears: "You are changing Gold from 99 SAR to 129 SAR. Choose who this applies to."
Option A	"New subscribers only — existing 16 members keep paying 99 SAR." Immediate for new signups. Zero impact on existing.
Option B	"All members — existing members notified and moved to 129 SAR after 30-day notice." Triggers notice flow.
Step 3	Merchant confirms. Cannot be undone once notifications are sent.
Dashboard shows	"16 members at 99 SAR + 8 members at 129 SAR = 24 Gold members total." Both price groups always visible separately.

28.3 Name Change Rules

Rule	Detail
Name changes are cosmetic only	Immediate everywhere. No member notification. No restrictions on frequency or creativity.
What changes	Plans page, member badge, all future notifications, Salla Customer Group name (synced via API atomically).
What does NOT change	Price, benefits, subscriptions, salla_group_id, salla_offer_id. Nothing functional.
Atomic update	Our DB + Salla Customer Group name in one transaction. Rollback if API fails. Badge updates on member's next page load.
Merchant warning shown	"All active member badges will show the new name on their next visit."
Name + price change together	Processed independently. Name: immediate + cosmetic. Price: follows full price change protocol regardless.

Section 29 — Plan Deactivation (3 Scenarios)

Scenario A — Deactivate One Plan (e.g. remove Silver, keep Gold)

Step	Action
1	Merchant clicks "Deactivate Silver plan". Information screen appears — cannot skip: "You have 31 active Silver members. Here is exactly what will happen."
2	Two checkboxes (informed consent — no typing required): ☐ I understand what will happen to my members. ☐ I confirm deactivation.
3	Silver plan removed from plans page immediately — new sign-ups impossible.
4	Existing Silver members: benefits continue until their individual current_period_end. Not affected yet.
5	Notification sent to all Silver members: "Silver plan is ending. Benefits active until [date]. No further charges."
6	System creates remove_from_group scheduled job per member — scheduled_for = their current_period_end.
7 (optional)	Merchant offered: "Would you like to send Silver members an upgrade offer to Gold?" Migration email sent if yes.

Scenario B — Deactivate ALL Plans (Full Program Shutdown)

Only case requiring typed confirmation. Full shutdown is high-stakes and irreversible.

Step	Action
1	Merchant clicks "Shut down membership program". Must type "SHUTDOWN" to confirm. Warning: "This will cancel ALL [N] active memberships."
2	Plans page removed immediately. No new sign-ups.
3	All active member subscriptions cancelled via Salla Cancel Subscription API. All members notified immediately.
4	All Customer Groups removed. All Special Offers deactivated. All coupons deactivated.
5	Merchant receives final data export (CSV). Data retained 90 days. Purged after 90 days.

Scenario C — Temporary Pause (Soft Deactivation)

Detail	Description
What it does	Hides plan from plans page. No new sign-ups. Existing members completely unaffected — they keep all benefits and keep paying.
Reactivation	Merchant can reactivate anytime. Plan reappears immediately. Existing members never notice the pause.
Use case	Merchant wants to rethink pricing or benefits before reopening to new members.

Section 30 — Merchant Offboarding (When Merchant Cancels Our App)

Triggered by: app.subscription.canceled OR app.subscription.expired webhook from Salla.

Step	Action
1	app.subscription.canceled or app.subscription.expired received. Begin offboarding immediately.
2	Cancel ALL active member subscriptions via Salla Cancel Subscription API. This stops all future member charges.
3	Notify ALL members: "The store's membership program has ended. Your benefits remain active until [date]." Each member receives their individual end date.
4	Remove all Salla Customer Groups. Deactivate all Salla Special Offers. Deactivate all active coupon codes.
5	Send merchant final data export: member list, revenue history, benefit usage stats (CSV).
6	Set merchant status=cancelled. Retain all data for 90 days.
7	If merchant returns within 90 days: restore all previous settings, pre-fill wizard. Previous members must re-subscribe themselves. After 90 days: data purged permanently.

Merchant Agreement at Install Time

At setup wizard Step 5, the merchant must agree: "If I deactivate this app, all active member subscriptions will be cancelled and members will be notified." This is a mandatory checkbox — not a buried clause. Cannot install without agreeing.

Section 31 — Value Summary Before Member Cancellation

When a member attempts to cancel their membership — before they reach Salla's cancellation screen — our App Snippet intercepts (via Salla events where possible) and shows a salla-sheet with their value summary. This is not a dark pattern. It is an information screen. The member can still cancel.

Element	Arabic	English
Title	><	Before you go
Remaining benefits	>2 . 12 and.<	2 free shipping uses left this month. Your gift expires in 12 days.
Total saved	>and 240 SAR .<	You have saved 240 SAR since joining.
Primary CTA	>[and]<	[Stay a member]
Secondary link	>[ ]<	[Continue cancellation]

Note: If Salla's cancellation event cannot be intercepted, this screen is shown proactively inside the member dashboard as a "Are you sure?" step before redirecting to Salla's cancellation flow.

Section 32 — Win-Back Flow (Former Members)

Members who cancelled are our highest-converting audience. They already know the product and trusted the store. Three touchpoints are designed specifically for former members.

Touchpoint	Arabic	English
Badge area (non-member browsing store)	> ! and <	We are glad you are back! Rejoin your Gold membership?
Plans page (former member visits)	> and! and . and and and.<	Welcome back! You were a Gold Member. Rejoin now and get your first gift immediately.
Win-back email (day 30 after cancel)	>. and 847 SAR and. and<	We miss you. You saved 847 SAR during your membership. Ready to come back?

Technical Implementation

Element	How It Works
Former member detection	App Snippet reads salla.auth.customer.id on page load → checks members table → if status=expired AND cancellation was voluntary: show win-back badge teaser instead of standard non-member teaser.
Plans page personalization	GET /api/v1/store/:slug/plans with auth token → if former member detected: return { is_former_member: true, previous_tier, total_saved } → plans page renders personalized "Welcome back" message.
Win-back email trigger	Scheduled job: 30 days after member.cancelled_at → check member.status===expired AND member.cancellation_reason !== 'merchant_deactivated' → send win-back email.

Section 33 — Order Confirmation Adaptive States

The order confirmation App Snippet adapts to exactly what was used on this specific order. 5 distinct states.

State	Arabic Confirmation Line	English Confirmation Line
Member auto-discount only	>and 45 SAR Member .<	You saved 45 SAR with your automatic member discount on this order.
Free shipping coupon used	> — 1 .<	Free shipping applied — 1 use remaining this month.
Monthly gift coupon used	> — 1 and.<	Your monthly gift was used on this order — next gift arrives May 1.
Multiple benefits used	>and 45 SAR () + — 1 .<	You saved 45 SAR (discount) + free shipping applied — 1 use remaining.
No benefits applied (logged out or not logged in)	> Member — and and .<	No member benefits applied — make sure you are logged in to receive your discount.

Technical Implementation

App Snippet detects order confirmation URL pattern → calls GET /api/v1/member/history (last order) → response includes { benefits_used: [...], amount_saved, shipping_used, gift_used } → renders appropriate state. Loading: salla-skeleton component. Error: silent fail — no block shown if API fails.

Section 34 — Tier Upgrade Flow (Silver → Gold)

Salla constraint: Recurring Payments does not support in-place plan switching. Member must cancel Silver and subscribe to Gold. We make this seamless with a guided 3-screen flow.

3-Screen Guided Flow

Screen	Arabic Content	English Content
Screen 1 — What changes	> :< >+ 15% 10%< >+ 4 2< >+ < >+ andand <	Upgrading from Silver to Gold means: + 15% discount instead of 10% + 4 free shipping uses instead of 2 + Monthly exclusive gift + Early product access
Screen 2 — What happens technically	> and — 30 .< > and — and.<	Your Silver subscription ends today — Silver benefits stay until April 30. Your Gold subscription starts today — Gold benefits activate immediately.
Screen 3 — Confirm	>[]: — 99 SAR/<	[Button]: Subscribe to Gold now — 99 SAR/month

Technical Implementation

Step	What Happens
Member clicks Upgrade	System checks: is there an active Gold plan? If no Gold plan exists: show "Gold plan not available" message.
Screen 1 shown	Comparison loaded from GET /api/v1/member/dashboard (Silver) vs GET /api/v1/store/:slug/plans (Gold benefits).
Member confirms on Screen 3	Redirect to Salla Gold subscription product checkout URL.
On successful Gold subscription	subscription.created webhook fires → system adds member to Gold Customer Group → generates full free shipping coupon immediately → generates full gift coupon immediately. Silver remove_from_group job created for Silver's period_end. Member stays in Silver group until then — no gap in benefits.
Silver cancellation timing	We do NOT cancel Silver subscription immediately. We let it run to current_period_end to honor what was paid. Only then remove from Silver group.

Section 35 — Milestone Celebration Cards (Merchant Dashboard)

Milestone cards appear in the merchant dashboard at defined achievements. They appear once, stay for 7 days, then archive. They make success visible and motivating.

Milestone	Arabic Card Text	English Card Text
First member joins	>and and ! .<	Your first member just joined! Your program is working perfectly.
10 members	>and 10 — 990 SAR Member.<	You hit 10 members — that is 990 SAR/month from your membership program.
50 members	>50 and! and 4,950 SAR . and.<	50 members! Your program generates 4,950 SAR/month. Keep growing.
First month complete	> and . : 2,340 SAR.<	You completed your first full month. Total member savings: 2,340 SAR.
Member 6-month anniversary	> and and 6 — and 847 SAR .<	Ahmed Al-Mansouri has been a member for 6 months — saved 847 SAR.

Technical Implementation

On every dashboard load: check milestone_events table for merchant. If milestone reached and not yet shown: insert milestone_event record with shown_at=NOW() and include card in dashboard response. After 7 days: card moves to archived section. Cards are informational only — no action required.

Section 36 — Promotion Kit (Merchant Growth Tool)

The merchant's biggest growth problem is not knowing how to promote their membership program. We solve this by providing ready-made assets inside the dashboard.

36.1 Plans Page Link — Always at Top

The membership plans page URL is permanently displayed at the top of the merchant dashboard — always visible, never requires searching. One-tap copy button next to it.

Element	Arabic	English
Label	> Member<	Membership page link
URL displayed	ourapp.com/store/store-slug/plans	ourapp.com/store/store-slug/plans
Action	>[] — and. : " "<	[Copy] — copies to clipboard instantly. Confirmation: "Copied!"

36.2 Pre-Made Social Media Captions

4 ready-made caption variations in Arabic and English. One tap to copy. Merchant posts directly to Instagram, WhatsApp, or Twitter/X.

Caption Type	Arabic	English
Announcement	>🎉 Member! and and + + . []<	🎉 We just launched our membership program! Join now for exclusive discounts + free shipping + monthly gifts. [link]
Benefit highlight	>✨ and : 15% 4 and . []<	✨ As a Gold Member you get: 15% off every order, 4 free shipping uses monthly, and an exclusive gift every month. [link]
Urgency	>⏰ and Member and! and and and. []<	⏰ Membership spots available now! Join today and get your benefits from day one. [link]
Social proof	>💬 andand . and and . []<	💬 Our members save hundreds every month. Join and start saving now. [link]

36.3 Store Navigation Placement Guide

In-dashboard step-by-step guide showing the merchant exactly how to add the membership link to their Salla store navigation. Screenshots provided for the top 5 most popular Salla themes. This is the most common reason new merchants get zero members — they never add the link.

Section 37 — Preview Member Experience (Merchant Dashboard Feature)

The merchant has never seen what their members see. This disconnect causes support issues and misconfigurations. A Preview button solves this permanently.

Preview Mode Shows	Arabic Label	English Label
Plans page as a store visitor	><	Preview plans page
Member dashboard as Gold member	> and and <	Preview Gold member dashboard
Member dashboard as Silver member	> and and <	Preview Silver member dashboard
Badge as it appears in store header	><	Preview store badge
Welcome popup as member sees it	> Welcome<	Preview welcome message

Technical Implementation

Detail	Specification
How it works	GET /api/v1/merchant/preview?view=plans|gold_dashboard|silver_dashboard|badge|welcome_popup — returns the exact same data that real members see, using the merchant's actual configured values.
Read-only	>Preview mode is strictly read-only. No actions available. Watermark displayed: "Preview — not real member data / — "<
Real data used	Preview shows actual plan names, actual discount percentages, actual gift description, actual benefit values as configured by this merchant.
Access	>Button in merchant dashboard header: " and / Preview as Member"<

Section 38 — Complimentary Members

A merchant wants to add a specific loyal customer to Gold membership as a gift — without charging them. This is allowed but managed carefully.

Rule	Detail
What it is	A member added manually by the merchant with no Salla subscription and no recurring charge.
How added	Merchant enters the customer's Salla customer ID in the dashboard. We add them to the Customer Group. No Salla subscription created.
Benefits they receive	All benefits of their assigned tier — discount, free shipping coupons, monthly gift, early access, badge.
Counted in plan limit	Yes. A complimentary Gold member counts toward the merchant's member limit (e.g. counts as 1 of their 200 Pro plan members).
Status in DB	members.status = 'complimentary' — tracked separately from paying members in all analytics.
Duration	Merchant defines an end date when adding. On end date: automatically removed from group. Or merchant can manually remove anytime.
How many allowed	No hard cap. But they count against the plan member limit. Merchant warned if adding a complimentary member would approach their limit.
Shown in dashboard	Member list shows "Complimentary" badge next to their name. Excluded from revenue calculations. Included in benefit usage stats.

Section 27 — Document Status

Area	Status	Open Questions
Problem statement + market	**LOCKED**	0
User personas (merchant + member)	**LOCKED**	0
Goals + success metrics	**LOCKED**	0
User stories (12 merchant + 9 member)	**LOCKED**	0
6 member benefits — Salla-verified	**LOCKED**	0
Merchant experience (8 phases)	**LOCKED**	0
Member experience (7 screens)	**LOCKED**	0
Bilingual standard AR + EN	**LOCKED**	0
Salla platform constraints (10)	**LOCKED**	0
Database schema (11 tables)	**LOCKED**	0
State machines (3)	**LOCKED**	0
12 webhooks	**LOCKED**	0
5 scheduler jobs	**LOCKED**	0
All API contracts	**LOCKED**	0
App Snippet (7 injection points)	**LOCKED**	0
Security requirements	**LOCKED**	0
6 race conditions	**LOCKED**	0

Email + notification system	**LOCKED**	0
All edge cases	**LOCKED**	0
V1 scope	**LOCKED**	0
Customer Group member cap	**NEEDS DEV TEST**	1 — blocks all group code
Merchant Terms of Service	**NEEDS LAWYER**	1 — blocks launch
Privacy Policy (PDPL)	**NEEDS LAWYER**	1 — blocks launch
Salla commission %	**NEEDS SALLA CONTACT**	1 — affects final pricing
Mobile design	*OUT OF SCOPE*	—

This PRD is complete. It covers problem, users, solution, features, and full technical specification. Developer can start from Section 14 (database) immediately. Three remaining business tasks run in parallel with development. Zero product or technical questions open.

Section 39 — Internal Admin Panel (Our Operations Dashboard)

What this is: Our internal dashboard — visible only to us (the app team). Not visible to merchants or members. This is our command center to monitor and operate the entire platform.

39.1 Who Uses It & Why

User	What They Need
Hanem (PM)	See total merchants, total revenue, growth trends, which merchants are at risk of churning from OUR app.
Developer / Ops	Monitor system health, failed webhooks, scheduler job status, API error rates, Salla API connectivity.
Support	Look up any merchant or member by name/email/store, view their full history, investigate issues.

39.2 Admin Dashboard — All Screens

Screen 1 — Business Overview

Metric	Detail
Total active merchants	Count. Breakdown: Starter / Pro / Unlimited. Delta vs last month.
Total Monthly Recurring Revenue (MRR)	Sum of all active merchant subscriptions. Delta vs last month.
New merchants this month	How many installed and converted from trial.
Trial-to-paid conversion rate	% of installs that converted after 7-day trial. Target: >60%.
Merchant churn rate	% cancelled this month. Alert if >5%.
Total members across all merchants	Sum of all active members on the platform.
Total membership revenue generated	Sum of all member subscription payments across all merchants. (We do not collect this — it shows platform health.)
Revenue chart	Our MRR over time. Line chart. 12-month view.
Merchant growth chart	New installs vs cancellations per month.

Screen 2 — Merchant Management

Column	Content
Merchant name / store	Store name. Link to their Salla store.
Our plan	Starter / Pro / Unlimited.
Status	Trial / Active / Suspended / Cancelled.
Active members	Their current member count.
MRR from this merchant	What they pay us monthly.
Installed date	When they installed.
Last login	Last time merchant opened their dashboard.
Setup complete?	Yes / No. If No: which step they are stuck on.
At risk?	Flag if: no members after 14 days, member count declining 2 months, no login 30 days.

Filterable by: status, plan, at-risk flag, setup complete. Searchable by store name or email.

Screen 3 — Individual Merchant Detail (Admin View)

Section	Content
Merchant info	Store name, owner email, Salla store ID, our plan, billing status, installed date, activated date.
Setup status	Which wizard steps completed. What is blocking launch if not live.
Plan configuration	Silver and Gold plan settings as configured by the merchant.
Member summary	Active / grace / cancelled / expired / complimentary counts per tier.
Revenue	Total paid to us. Next charge date. Billing history.
System events	All webhook events received for this merchant. Full payload viewable. Status of each.
Scheduler jobs	All scheduled jobs for this merchant. Status, next run, last run, error if any.
Admin actions	Send support email. Force re-run failed scheduler job. Extend trial (if needed). Mark as at-risk. Add internal note.

Screen 4 — System Health

Monitor	What It Shows
API status	Our server response time (p50, p95, p99). Error rate. Uptime %.
Webhook processing	Webhooks received today. Processed successfully. Failed. In queue. Processing latency.
Failed webhooks	List of all failed webhooks with event type, merchant, error, retry count. Admin can manually retry.
Scheduler health	Status of all 5 scheduler jobs. Last successful run. Next scheduled run. Any failures.
Salla API connectivity	Last successful API call per endpoint. Error rate. 429 rate limit hits.
Database	Connection status. Query latency. Storage used.
CDN status	Plans page cache hit rate. Last purge per merchant.

Screen 5 — Webhook Event Log (Admin)

Column	Content
Timestamp	When received.
Event type	e.g. subscription.created
Merchant	Which store.
Status	Processed / Failed / Skipped / In Queue.
Processing time	How long it took.
Attempts	How many times tried.
Error	If failed — full error message.
Action	Admin can view full payload. Retry manually. Mark as skipped.

Filterable by: event type, merchant, status, date range. Searchable by salla_event_id.

Screen 6 — Member Lookup (Cross-Merchant Search)

Admin can search for any member across all merchants by: name, mobile number, email, or Salla customer ID. Useful for support when a customer contacts us directly.

Search Result Shows	Detail
Which merchant's membership	Store name and link.
Member status	Active / Grace / Cancelled / Expired.
Tier and subscribed price	
Join date and renewal date	
Recent benefit events	Last 10 benefit events for this member.
Recent webhook events	Last 10 webhooks related to this member's subscription.

Screen 7 — Scheduler Monitor

Job	What Admin Sees
generate_monthly_coupons	Last run date. Success/failure per merchant. Failed merchants list. Manual trigger button.
renewal_charge	Charges scheduled today. Charges completed. Charges failed. Failed member list.
grace_period_expiry	Members currently in grace period. Expiry dates. How many expire today.
remove_from_group	Members scheduled for group removal this week. Completed removals today.
group_health_check	Last run status. Any groups recreated. Any members re-added. Issues found.

Admin can: manually trigger any job for a specific merchant. Re-run failed jobs. View full job logs.

39.3 Admin Panel — Technical Specification

Authentication & Access

Rule	Detail
Who has access	Only our team. No merchant or member can access this panel ever.
Authentication method	Separate login — email + password + 2FA (TOTP). Not connected to Salla OAuth.
Session	HttpOnly + Secure + SameSite=Strict cookie. 8-hour session timeout.
Roles	Admin (full access). Support (read-only + member lookup + internal notes). Dev/Ops (system health + webhook retry + scheduler).
URL	admin.ourapp.com — completely separate from merchant dashboard. Different subdomain. Different deployment.

Admin API Endpoints

Endpoint	Method	Notes
GET /admin/overview	GET	MRR, merchant count, conversion rate, churn rate, total members.
GET /admin/merchants	GET	?status ?plan ?at_risk ?search ?page — paginated merchant list.
GET /admin/merchants/:id	GET	Full merchant detail with config, members, revenue, jobs, webhooks.
POST /admin/merchants/:id/note	POST	{ note } — add internal note to merchant record.
POST /admin/merchants/:id/extend-trial	POST	{ days } — extend trial period (exceptional cases only).
GET /admin/system/health	GET	API status, webhook queue, scheduler status, DB status, CDN status.
GET /admin/webhooks	GET	?status ?event_type ?merchant_id ?from ?to — webhook event log.
POST /admin/webhooks/:id/retry	POST	Manually retry a failed webhook.
GET /admin/scheduler/jobs	GET	All scheduled jobs with status. Filter by type and merchant.
POST /admin/scheduler/run	POST	{ job_type, merchant_id } — manually trigger a specific job.
GET /admin/members/search	GET	?q={name|mobile|email|salla_customer_id} — cross-merchant member lookup.
GET /admin/revenue	GET	?period — MRR chart data, breakdown by plan.

Database Addition — admin_users table

Field	Type	Notes

id	UUID PK	
email	VARCHAR(255) UNIQUE NOT NULL	
password_hash	TEXT NOT NULL	bcrypt. Never store plaintext.
totp_secret	TEXT	Encrypted. For 2FA.
role	ENUM	admin | support | devops
last_login_at	TIMESTAMP	
created_at	TIMESTAMP	

Database Addition — admin_notes table

Field	Type	Notes
id	UUID PK	
admin_user_id	UUID FK→admin_users	
merchant_id	UUID FK→merchants	
note	TEXT NOT NULL	Internal note — never visible to merchant.
created_at	TIMESTAMP	

39.4 Admin Panel — Three States (Same Rule)

State	Rule
Empty	No merchants yet: "No merchants installed yet." No webhooks: "No webhook events in this period."
Loading	Skeleton screens for all data tables. Charts show loading animation.
Error	If system health check fails: red banner. If DB query fails: "Could not load data — retry." Never expose raw errors.

39.5 Admin Panel — V1 Scope

Feature	In V1?	Notes
Business overview (MRR, merchants, conversion)	YES	Essential from day one
Merchant list with search and filters	YES	Essential from day one
Individual merchant detail view	YES	Essential for support
System health monitor	YES	Essential for ops
Webhook event log with retry	YES	Essential for debugging
Scheduler monitor with manual trigger	YES	Essential for ops
Cross-merchant member lookup	YES	Essential for support
Internal notes on merchants	YES	
Revenue chart (MRR over time)	YES	
Role-based access (admin/support/devops)	YES	
Advanced analytics (cohort, LTV, payback period)	V2	After we have enough data
Automated churn intervention workflows	V2	
Financial reconciliation reports	V2	

Section 40 — Business Admin Panel (Owner View)

> **This is your panel as the app owner.** You open it, you see everything. Every merchant, every member, every plan, every benefit, every coupon, every subscription — with full detail and full control. One URL: admin.ourapp.com

40.1 Overview — The Navigation Structure

Nav Item	What It Is
📊 **Overview**	Top-level KPIs — your business health at a glance
🏪 **Merchants**	All merchants table — click any to open their full profile
👥 **Members**	All members across all merchants — searchable, filterable
🔄 **Subscriptions**	All active and historical subscriptions
🎁 **Coupons**	All gift and free shipping coupons ever generated
⚡ **Benefit Events**	Every benefit applied or missed across every order
🔧 **System**	Webhooks, scheduler, health — ops view

40.2 Screen 1 — Overview (Your Business KPIs)

KPI Card	What It Shows	Alert Condition
Total Active Merchants	Count right now. Breakdown: Starter / Pro / Unlimited. Arrow: ↑↓ vs last month.	—
MRR (Our Revenue)	Total monthly income from merchant subscriptions. Arrow vs last month.	Drop >5% month-over-month
Trial → Paid Conversion	% of merchants who installed and became paying customers.	Below 60%
Merchant Churn	% who cancelled this month.	Above 5%
Total Members (Platform)	All active members across every merchant combined.	—
At-Risk Merchants	Count of merchants with churn signals. Red if any.	Any merchant flagged
Failed Webhook Events	Count of unresolved webhook failures right now.	Above 0
Scheduler Status	Green if all jobs running. Red if any failed last 24h.	Any failure

Below the KPI cards: **MRR chart** (12 months), **Merchant growth chart** (new vs churned per month), **Platform member count chart**.

40.3 Screen 2 — All Merchants Table

Every merchant who ever installed the app. One row per merchant. Click any row to open their full profile.

Column	Content
Store name	Merchant's store name. Clickable — opens their full profile.
Owner email	Contact email.
Our plan	Starter / Pro / Unlimited. With monthly price.
Status	Trial (N days left) / Active / Suspended / Cancelled. Color coded.
Setup	Complete ✓ / Stuck at Step N ✗
Active members	Number right now. e.g. "14 Silver, 8 Gold"
Member limit used	e.g. "22 / 200" with progress bar. Red if >90%.
MRR from them	What they pay us monthly.
Installed	Date installed.
Activated	Date trial converted to paid. Empty if still in trial.
Last login	Last time merchant opened their dashboard. Red if >14 days.
Health	🟢 Healthy / 🟡 At Risk / 🔴 Critical

Filters (all combinable):

Filter	Options
Status	All / Trial / Active / Suspended / Cancelled
Our Plan	All / Starter / Pro / Unlimited
Setup	All / Complete / Incomplete
Health	All / Healthy / At Risk / Critical
Has members?	All / Has members / Zero members
Installed date	Date range picker
Search	By store name or owner email

Sort by: MRR, Member count, Install date, Last login, Status. **Export:** CSV of filtered results.

40.4 Screen 3 — Individual Merchant Full Profile

You click a merchant and this opens. Everything about this merchant in one page, organized in tabs.

Tab A — Merchant Info & Status

Field	Content

Store name & URL	Clickable link to their live Salla store.
Owner name & email & mobile	From Salla profile.
Salla store ID	Internal identifier.
Our plan	Starter / Pro / Unlimited. With upgrade/downgrade button.
Billing status	Active / Failed / Suspended. Next charge date and amount.
Billing history	Every charge we made: date, amount, status (paid / failed).
Install date	When they installed.
Trial start & end	Trial period dates.
Activation date	When billing started.
Setup wizard	Steps 1–5 with ✓ or ✗ and timestamp for each completed step.
Coming soon registrations	N customers registered interest. List with names and dates.
Health flags	Any active risk signals: no members / declining / not logging in / gift not configured.
Internal notes	Your notes about this merchant. Add new note. Timestamped.

Tab B — Plans & Benefits (What the Merchant Has Configured)

This is the tab that directly answers your question — you see exactly what they enabled, disabled, configured, or left empty.

Item	What You See
Silver Plan — Status	Active / Paused / Deactivated / Never configured
Silver Plan — Name	Arabic + English display name as merchant set it
Silver Plan — Price	Current price for new subscribers. How many price versions exist.
Silver Plan — Benefit 1 (Auto Discount)	✅ Enabled — 10% / ❌ Not configured. Salla Special Offer ID shown.
Silver Plan — Benefit 3 (Free Shipping)	✅ Enabled — 2 uses/month / ❌ Not configured. Current month coupon status.
Silver Plan — Benefit 5 (Early Access)	✅ At least 1 product hidden / ❌ No products set
Silver Plan — Benefit 6 (Badge)	Always active if plan is active.
Silver Plan — Salla Group ID	Customer Group ID in Salla. Link to verify.
Gold Plan — Status	Active / Paused / Deactivated / Never configured
Gold Plan — Name	Arabic + English as merchant set it
Gold Plan — Price	Current price. Price versions history.
Gold Plan — Benefit 1 (Auto Discount)	✅ Enabled — 15% / ❌ Not configured
Gold Plan — Benefit 2 (Member Price)	✅ Configured on N products / ❌ Not configured / Product list shown
Gold Plan — Benefit 3 (Free Shipping)	✅ Enabled — 4 uses/month / ❌ Not configured
Gold Plan — Benefit 4 (Monthly Gift)	✅ Configured — Gift name + current month config / ⚠️ Not configured for next month / ❌ Never configured
Gold Plan — Benefit 5 (Early Access)	✅ N products / ❌ None
Gold Plan — Benefit 6 (Badge)	Always active if plan is active.
Gold Plan — Salla Group ID	Customer Group ID in Salla.
Gift Configuration History	Every month: what was the gift, redemption rate, generated on time or late.
Price Change History	Every price change ever made — date, old price, new price, who it applied to.

Tab C — Members

All members belonging to this merchant. Same columns as the global members table but filtered to this merchant only.

Column	Content
Name	Member name from Salla. Clickable — opens their full member profile.
Tier	Silver / Gold / Complimentary
Status	Active / Grace Period (N days left) / Cancelled (active until date) / Expired / Complimentary
Subscribed price	Their locked price per month
Joined	Date they subscribed
Renews	Next billing date
Total saved	Total SAR saved since joining
Last order	Last order date as member. Red if >45 days.
Shipping uses	This month: used / quota. e.g. "2 / 4"
Gift this month	Available / Used / Expired / Being prepared
At risk?	🔴 if flagged

Filters: By tier, by status, by at-risk flag, by join date range, by subscribed price. **Search:** by name, mobile, email. **Export:** CSV.

Tab D — Subscriptions (This Merchant's Members' Billing)

Column	Content
Member name	Clickable

Tier	Silver / Gold
Salla Subscription ID	The actual Salla recurring payment ID
Subscribed price	Their locked price
Price version	Which price version they are on (if multiple exist)
Status	Active / Grace / Cancelled / Expired
Period start	Current period start date
Period end	Current period end date
Next renewal	Scheduled renewal charge date
Months active	Total months this member has been subscribed
Total charged	Total SAR collected from this member
Last charge status	Succeeded / Failed / Pending

Filters: By tier, by status, by price version, by period end date range. Useful for seeing who renews this week.

Tab E — Coupons (All Coupons for This Merchant)

Column	Content
Member name	Who this coupon belongs to. Clickable.
Type	Monthly Gift / Free Shipping
Month	Which month this coupon is for
Coupon code	The actual code
Gift description	If gift: what was it (e.g. "25% off accessories")
Status	Generated / Used / Expired / Failed to generate / Deactivated
Generated on	When scheduler created it
Used on	Date used (if used)
Expires	Expiry date
Uses left	For free shipping: remaining uses this month

Filters: By type, by month, by member, by status. **Key view:** Filter by month + status=Failed to see any members who did not get their coupon.

Tab F — Benefit Events (Every Benefit Applied for This Merchant)

Column	Content
Date	When the order was placed
Member	Clickable
Order ID	Salla order ID. Clickable link to Salla order.
Benefit type	Auto Discount / Free Shipping / Monthly Gift / Member Price / ⚠ Not Applied
Amount saved	SAR saved on this event
Coupon used	Code if applicable
Reason not applied	If "Not Applied" — why: member not logged in / coupon exhausted / product excluded

Filters: By benefit type, by member, by date range, by "not applied" only. This is your dispute investigation view.

Tab G — Activity Log (Everything That Happened)

Event Type	Example Entry
Member joined	"Ahmed Al-Mansouri joined Gold — 99 SAR/month — 14 Apr 2026"
Member cancelled	"Fatima Al-Zahrani cancelled Silver — benefits active until 30 Apr 2026"
Payment failed	"Khalid Al-Otaibi payment failed — grace period started — 12 Apr 2026"
Gift generated	"May gifts generated — 22 Gold members — 28 Apr 2026"
Gift not configured	"⚠ May gift not configured — alert sent to merchant — 25 Apr 2026"
Benefit changed	"Gold discount changed: 15% → 20% — 1 Apr 2026"
Plan paused	"Silver plan paused — 10 existing members unaffected — 5 Mar 2026"
Price changed	"Gold price raised: 99 → 129 SAR — applies to new members only — 1 Mar 2026"

Filters: By event type, by member, by date range. **Export:** CSV.

40.5 Screen 4 — Individual Member Profile (Admin View)

You click any member anywhere in the panel. This opens. Full lifecycle of this member.

Section	What You See
Identity	Name, mobile, email (from Salla — never stored by us), Salla customer ID, which merchant they belong to.
Subscription	Tier, status, subscribed price, price version, Salla subscription ID, join date, current period start/end, next renewal date.
Full Billing History	Every charge ever: date, amount, status (succeeded / failed / grace period started). Visual timeline.
Free Shipping — All Time	Month-by-month table: quota, uses, coupon code, coupon status, generated date, expires date.

Monthly Gift — All Time	Month-by-month: what was the gift, coupon code, status (used / expired / being prepared), which order it was used on, savings.
Auto Discount — All Orders	Every order where discount applied: date, order total, SAR saved. Running total.
Order History as Member	Every order placed while an active member — order ID, date, total, which benefits were used, total saved on that order.
Total Savings	Grand total saved since joining. Breakdown by benefit type.
Lifecycle Timeline	Visual timeline: Joined → First order → Payment failures → Renewals → Status changes → Last activity.

40.6 Screen 5 — All Members Table (Cross-Merchant)

All members on the platform — across every merchant — in one searchable table.

Filter	Options
Merchant	Dropdown — all merchants or specific one
Tier	All / Silver / Gold / Complimentary
Status	All / Active / Grace Period / Cancelled / Expired
At-risk	All / At-risk only
Subscribed price	Range filter — e.g. "49–99 SAR"
Join date	Date range
Renews this week	Quick filter — members renewing in next 7 days
In grace period	Quick filter — members currently in grace period
Search	By name, mobile, email, or Salla customer ID

Export: CSV of filtered results.

40.7 Screen 6 — All Coupons Table

Filter	Options
Type	All / Monthly Gift / Free Shipping
Month	Month picker
Status	All / Generated / Used / Expired / Failed / Deactivated
Merchant	Specific merchant or all
Tier	Silver / Gold
Search	By coupon code or member name

Key use case: Filter by Month + Status=Failed → see every member who did not receive their coupon this month. Immediate action needed.

40.8 Screen 7 — All Benefit Events Table

Filter	Options
Benefit type	All / Auto Discount / Free Shipping / Monthly Gift / Member Price / Not Applied
Merchant	Specific or all
Member	Search by name
Date range	From / To
"Not applied" only	Quick filter — shows cases where member should have benefited but didn't

Export: CSV. Used for dispute investigation and benefit performance analysis.

40.9 Admin Actions Available to You

Action	Where	When You Use It
Extend merchant trial	Merchant profile	Merchant had setup issues and needs more time
Add internal note to merchant	Merchant profile	Track support calls, special agreements, issues
Mark merchant as at-risk	Merchant profile	Triggers proactive outreach
Send email to merchant	Merchant profile	Direct support communication
Manually retry failed coupon generation	Merchant coupons tab	Scheduler failed — members need their gift
Retry failed webhook	System screen	Critical webhook failed — needs reprocessing
Manually trigger scheduler job	System screen	Force re-run for specific merchant
Export any table to CSV	Every table	Financial reporting, investor updates, team review
View raw webhook payload	Any event row	Debugging a specific event

40.10 Developer — All Admin API Endpoints

Endpoint	Method	Returns
GET /admin/overview	GET	All KPI cards: MRR, merchant count, conversion, churn, platform members, at-risk count, webhook failures
GET /admin/merchants	GET	?status ?plan ?health ?setup_complete ?has_members ?installed_from ?installed_to ?search ?sort ?page
GET /admin/merchants/:id	GET	Full merchant object: info, billing history, plans config, benefits config per plan, member counts, setup status, coming soon registrations, notes

GET /admin/merchants/:id/plans	GET	Silver + Gold plan config with benefit status per benefit (enabled/disabled/configured value), gift history, price version history
GET /admin/merchants/:id/members	GET	?tier ?status ?at_risk ?search ?sort ?page — all members for this merchant
GET /admin/merchants/:id/subscriptions	GET	?status ?tier ?price_version ?renews_before ?page — all subscriptions for this merchant
GET /admin/merchants/:id/coupons	GET	?type ?month ?status ?member_id ?page — all coupons for this merchant
GET /admin/merchants/:id/benefit-events	GET	?benefit_type ?member_id ?from ?to ?not_applied_only ?page
GET /admin/merchants/:id/activity	GET	?event_type ?member_id ?from ?to ?page — full activity log
GET /admin/members	GET	?merchant_id ?tier ?status ?at_risk ?price_min ?price_max ?joined_from ?joined_to ?renews_before ?grace_only ?search ?page — cross-merchant member table
GET /admin/members/:id	GET	Full member profile: identity, subscription, full billing history, free shipping history (all months), gift history (all months), discount events, order history, savings totals, lifecycle timeline
GET /admin/coupons	GET	?type ?month ?status ?merchant_id ?tier ?search ?page — all coupons cross-merchant
GET /admin/benefit-events	GET	?benefit_type ?merchant_id ?member_id ?from ?to ?not_applied_only ?page — all benefit events
GET /admin/revenue	GET	?period=12m — MRR chart, breakdown by plan, new MRR, churned MRR per month
POST /admin/merchants/:id/note	POST	{ note } — add internal note
POST /admin/merchants/:id/extend-trial	POST	{ days } — extend trial
POST /admin/merchants/:id/email	POST	{ subject, body } — send email to merchant
POST /admin/webhooks/:id/retry	POST	Retry a failed webhook
POST /admin/scheduler/run	POST	{ job_type, merchant_id } — manual trigger
GET /admin/export/merchants	GET	CSV — all merchants with all columns
GET /admin/export/members	GET	CSV — ?merchant_id — members filtered
GET /admin/export/coupons	GET	CSV — ?merchant_id ?month ?type

Section 43 — Brand & Product Identity (Final Locked)

All decisions in this section are final and locked. They override any previous color, naming, or design direction in this document.

43.1 Product Name

Language	Name	Usage
Arabic (primary)	**Member Plus**	All Arabic screens. Always full name. Never abbreviated.
English	**Member Plus**	All English screens. Topbar, welcome screen, emails.
Display treatment	>Last word "" / "Plus" rendered in primary purple #BE52EF<	Applies to topbar logo text and welcome screen header only.

43.2 Primary Color — LOCKED

#BE52EF — Primary purple. This is the brand color. It replaces green (#0F6E56) as the primary interactive color across the merchant dashboard. Green is retained for success states only.

Token	Value	Used For
--purple	#BE52EF	CTA buttons, active nav, logo, badges, segment controls, focus rings, featured toggle
--purple-d	#9B35D4	Button hover states, darker emphasis
--purple-l	#F3E0FD	Selected states, light fills, card highlights
--purple-ll	#FAF0FF	Very light tint for card backgrounds when highlighted
--green (success only)	#0F6E56	Success states, confirmation icons only. Not primary.
--gold (tier indicator)	#C9A84C	Gold membership tier display only.
--silver (tier indicator)	#B0A898	Silver membership tier display only.

43.3 Logo Mark

Element	Specification
Shape	Diamond (rotated square) — flat SVG, no 3D, no gradients, no glow effects
Fill	#BE52EF — solid diamond fill
Symbol inside	Plus mark (+) — white, centered, geometric rectangles (not strokes at small sizes)
34px (topbar)	Diamond polygon + white rect cross. SVG only.
44px (welcome screen)	Same construction at larger size.
Never	3D effects, gradients on the mark itself, glow, drop shadow, the original uploaded logo file as-is in UI
Original logo file	The uploaded Diamond Plus Logo file is the brand concept reference only. The flat SVG implementation is what ships.

43.4 Merchant Wizard — Final Structure (4 Steps)

Language is NOT a wizard step. Language is auto-detected from the merchant's Salla account. Toggle always visible top-right of every screen. This decision is final.

Step	Name	Content	Validation
Welcome	> Welcome (pre-wizard)<	App logo, store name, 3-item checklist of what's needed, estimated time (5 min), single CTA "Start Setup". Merchant must actively start — not auto-forwarded.	None — informational only
Step 1	Prices & Billing Cycles	>Per-plan: Featured badge toggle (one plan at a time, merchant controls), Billing cycle segment (/ and — independent per plan, confirmed supported by Salla API via interval_unit field), plan names (AR + EN), price. Price lock note outside cards as footnote.<	All name fields non-empty. Price ≥ 1. Blocks navigation if invalid.
Step 2	Benefits	Two sections: Automatic benefits (B2, B5, B6 — locked on, auto-tag, not editable). Configurable benefits (B1 auto discount locked on, B3 free shipping toggleable). Discount % per tier. Shipping uses per tier. Gold must exceed Silver — validated.	Discount fields 1–50%. Gold discount > Silver discount. Blocks if invalid.
Step 3	Monthly Gift	Insight card (navy, purple icon, 3× retention stat). Gift type (% or fixed), value, applies-to, description AR + EN. Live preview panel showing exact member view. Warning: alerts 3 days before month end if unconfigured.	Value ≥ 1. Both descriptions non-empty. Blocks if invalid.
Step 4	Review Settings	Summary table: Pricing → Benefits → Monthly Gift. Two mandatory consent checkboxes (cannot launch without both checked). Launch button: "Launch Program ↗"	Both checkboxes checked. Blocks if either unchecked.

43.5 Merchant Dashboard — Sidebar Rules

Rule	Specification
Arabic mode	Sidebar on RIGHT. Content on left. Shell direction: RTL.
English mode	Sidebar on LEFT. Content on right. Shell direction: LTR.
Store identity position	TOP of sidebar — store avatar + store name + trial days. Never at bottom.
Trial days	Below store name. One text line, no chip, no border. Green if ≥ 3 days. Amber if ≤ 2 days.
Plan info	BOTTOM of sidebar — current plan name in purple. Upgrade link below.
Active nav item	background: rgba(190,82,239,0.15) · border-color: #BE52EF

43.6 Billing Cycle — Technical Confirmation

Confirmed from Salla API docs (docs.salla.dev): Each plan can have an independent billing cycle via the `recurring.interval_unit` and `recurring.interval_count` fields in the Create Order API. Silver plan monthly + Gold plan annual is technically supported. Each plan = separate Salla product with independent recurring configuration.

Open item D-16: Developer must test annual billing cycle end-to-end on staging store before committing to offering it. Monthly is confirmed working. Annual needs verification.

43.7 Merchant Cancellation — What Happens to Members (Final)

Step	Action
1	Salla fires app.subscription.canceled or app.subscription.expired webhook. Offboarding begins immediately.
2	Cancel ALL active member subscriptions via Salla Cancel Subscription API. No future charges.
3	>Notify ALL members individually: " Member . [date]." Each member gets their individual end date.<
4	Remove all Salla Customer Groups. Deactivate all Special Offers. Deactivate all coupon codes.
5	Send merchant final data export (CSV): member list, revenue history, benefit usage stats.
6	Set merchant status=cancelled. Retain all data 90 days. After 90 days: permanent purge.
7	If merchant returns within 90 days: restore all settings, pre-fill wizard. Previous members must re-subscribe themselves.

Open item H-07: Refund policy not yet defined. If merchant cancels on day 3 of month, do members get a prorated refund? Requires lawyer input before launch. Currently: no refund policy in place.

43.8 Price Change Notification — New Rule

>When a merchant changes plan prices: (1) Change applies to new subscriptions only — existing member prices are permanently locked at their subscription price. (2) We send a notification to all current active members: " and — ". (3) Merchant dashboard shows clear warning before saving: "This change applies to new subscriptions only."<

Section 44 — Full PRD Audit (April 2026)

This section documents the complete audit of the PRD against three criteria: (1) gaps — things not covered, (2) risks — things that could go wrong, (3) full journey coverage — all users, all states, all screens.

44.1 What Is Covered — Confirmed Complete

Area	Coverage	Section
Problem statement + market sizing	Complete. 60K merchants, target 500–1K, revenue model clear.	§1, §4
Merchant persona	Complete. SME Saudi merchant, solo operator, fashion/beauty/food.	§3
Member persona	Complete. Repeat buyer, 2–5 prior orders, trusts the store.	§3
Our SaaS pricing (3 tiers)	Complete. Starter 79 SAR / Pro 149 SAR / Unlimited 249 SAR. Member caps defined.	§2
6 member benefits — all specified	Complete. B1–B6 each have: what it is, how it works, Salla mechanism, quota, rollover rule.	§10
Merchant setup wizard	Updated to 4 steps (language removed, welcome screen added). All validations defined.	§8, §43
Merchant dashboard — all screens	Complete. Overview, member list, member profile, analytics, gift management, activity log, settings, promotion kit, preview mode.	§8
Member full journey	Complete. Discovery → plans page → checkout → welcome popup → dashboard → benefits usage → renewal → cancellation → win-back.	§9
All 8 member states	Complete. new-visitor, former-member, active-gold, active-silver, grace-period, expired, cancelled, complimentary.	§15, §22
Grace period full flow	Complete. 3-day window, benefits continue, amber badge, full-width red CTA, expiry job, recovery flow.	§17, §24
Tier upgrade flow Silver → Gold	Complete. 3-screen guided flow. Silver benefits continue to period end. No gap.	§34
Merchant cancellation (offboarding)	Complete. 7-step flow. Members notified with individual end dates. Data retained 90 days.	§30, §43
Member cancellation (before cancel screen)	Complete. Value summary shown. No dark patterns. Member can still cancel.	§31
Win-back flow	Complete. 3 touchpoints. Personalized. 30-day trigger.	§32
Price change rules (all 4 scenarios)	Complete. New-only / all-with-30-day-notice / price-drop / blocked. Member notification defined.	§28, §43
Plan deactivation (3 scenarios)	Complete. Silver deactivated / Gold deactivated / Both deactivated.	§29
Order confirmation states	Complete. 5 adaptive states based on what was used.	§33
Email + notification system	Complete. 17 merchant emails + 11 member notifications + 4 WhatsApp/SMS triggers.	§23
Database schema	Complete. 11 tables. All relationships defined. Indexes specified.	§14
State machines	Complete. Merchant, member, coupon — all states and transitions.	§15
12 webhooks	Complete. All handled. Idempotency enforced.	§16
Race conditions (6)	Complete. Solutions defined for all 6.	§21
Security requirements	Complete. HMAC, OAuth, rate limiting, audit logs.	§20
App Snippet (7 injection points)	Complete. Each point: element, 3 states, performance rules.	§19
Complimentary members	Complete. How they are added, tracked, and distinguished from paying members.	§38
Internal admin panel	Complete. All tabs, all actions, role-based access (admin/support/devops).	§39
Business admin panel (owner view)	Complete. All tables, all merchant/member lookups, all financial views.	§40
Brand identity	Complete. Name: Member Plus. Color: #BE52EF. Logo: flat diamond + plus. All locked.	§43
Skills system (4 skills + 5 agents)	Complete. UI, UX, Copy, Graphic Design skills. All agents defined.	§42

44.2 Gaps Found and Resolved in This Audit

Gap ID	Gap Found	Resolution Added	Where
G-01	Wizard was 5 steps including language. Language is not a setup decision.	Wizard updated to 4 steps. Language auto-detected from Salla account. Toggle always top-right. Welcome screen added before wizard.	§43.4
G-02	Trial days chip was in topbar — creates anxiety, wrong placement.	Trial days moved to sidebar below store name. One text line, no chip.	§43.5
G-03	Billing cycle was program-wide. Both plans had same cycle.	Per-plan billing cycle: each plan can be monthly OR annual independently. Confirmed supported by Salla API (interval_unit per product).	§43.6
G-04	Benefits step only showed discount % and shipping. Other 4 benefits were invisible to merchant during setup.	All 6 benefits shown in step 2. Locked automatic (B2, B5, B6) shown separately from configurable (B1, B3, B4).	§43.4
G-05	>" " badge was hardcoded to Gold. Merchant had no control.<	Per-plan toggle. Merchant decides which plan to feature. One at a time. Mutual exclusion enforced.	§43.4
G-06	Gift step design was generic form. No preview of what member will see.	Gift step redesigned with live preview panel showing exact member dashboard view as merchant types.	§43.4
G-07	Review step copy was informal and too long.	Review step rewritten: professional confirmation language, two precise consent checkboxes, max 20 words each.	§43.4
G-08	Sidebar direction was fixed regardless of language.	RTL (Arabic): sidebar right. LTR (English): sidebar left. Auto-switches on language toggle.	§43.5

G-09	Store name was at bottom of sidebar with plan info.	Store avatar + store name + trial days moved to TOP of sidebar. Plan info stays at bottom.	§43.5
G-10	No field validation in wizard — merchant could proceed with empty or invalid fields.	All required fields marked *. Validation on each step before navigation. Specific error message shown in footer.	§43.4
G-11	No welcome screen between Salla OAuth and wizard start. Merchant arrived at wizard disoriented.	Welcome screen added: app logo, store name, 3-item checklist, 5-minute estimate, single "Start Setup" CTA.	§43.4
G-12	>Product name was inconsistent across sessions: "Salla Membership App", " Member", "and ".<	Name locked as Member Plus (Arabic) everywhere. No abbreviations.	§43.1
G-13	PRD cover page still said V1.0 and old name.	Cover updated to V3.0 and Member Plus.	Cover
G-14	Section 26 (V1 Scope) said Annual billing = V2, but Section 43.6 confirmed it per Salla API and added it to wizard.	Updated: Annual billing per plan = V1 (each plan independent cycle). Annual billing as a program-wide forced option = V2 only.	§26, §43.6

44.3 Risks — All Identified, Status Noted

Risk ID	Risk	Severity	Status	Mitigation
R-01	Salla Customer Group API fails with 1000+ members simultaneously	**CRITICAL**	Open — D-01 in pre-launch checklist	Test with 1000+ on demo store before any group code ships. This blocks everything.
R-02	subscriptions.read_write scope not approved by Salla before launch	**CRITICAL**	Open — D-02 in pre-launch checklist	Contact Salla Support on Day 1 of development. Cannot charge members without this scope.
R-03	Annual billing cycle not actually supported by Salla Recurring Payments API	**HIGH**	Open — D-16	Developer tests annual cycle on staging before it appears in wizard. If blocked, annual = V2.
R-04	Refund policy undefined — merchant cancels mid-month, members demand prorated refund	**HIGH**	Open — H-07	Lawyer defines policy before launch. Temporary stance: no prorated refunds, benefits to period end.
R-05	Merchant Terms of Service not written — no legal protection at launch	**CRITICAL**	Open — H-02, H-05	Lawyer writes ToS and Privacy Policy. Both must be publicly accessible URLs before app goes live on Salla App Store.
R-06	PDPL non-compliance — personal data stored without proper consent flow	**CRITICAL**	Open — H-03, H-04	Privacy Policy must be PDPL-compliant. Zero personal data stored beyond what Salla provides via their API.
R-07	Coupon code collision — same code generated for two members	**RESOLVED**	Closed	Unique constraint on coupon_code field. Generation retries on collision. UUID-based prefix.
R-08	Webhook received twice — double-charging or double-benefit	**RESOLVED**	Closed	webhook_events table with ON CONFLICT DO NOTHING. Idempotency on all webhook handlers.
R-09	Merchant deletes Salla Customer Group manually — members lose benefits silently	**RESOLVED**	Closed	Daily health check job recreates group, reassigns members, alerts merchant.
R-10	Salla Special Offer conflict with merchant's own discount campaigns	**RESOLVED**	Closed	Daily conflict check. In-dashboard warning. Merchant's decision. We document, not block.
R-11	Member subscribes during plan deactivation window — double subscription or lost state	**RESOLVED**	Closed	Soft gate (status=deactivating hides from plans page) + Hard gate (Salla product inactive).
R-12	Our app goes down — members lose benefits during outage	**RESOLVED**	Closed	Salla handles discounts + groups independently. Core benefits (discount, badge, access) survive our downtime.
R-13	Salla commission % unknown — our pricing may be unprofitable	**HIGH**	Open — H-01	Confirm commission with Salla Partner team before setting final public pricing.
R-14	App Snippet too heavy — slows merchant store pages	**RESOLVED**	Closed	Hard limit: <30KB gzipped. 1 API call max on page load. Each component in try-catch with kill switch.
R-15	Store ownership transfer — new owner doesn't know about membership program	**RESOLVED**	Closed	store.updated webhook triggers email to new owner with 7-day window to review or cancel.
R-16	Member joins on 28th of month — gift expires in 3 days before they can use it	**RESOLVED**	Closed	Gift generated at full value regardless of join date. Even joining on the 28th = full gift, expires end of month. Documented behavior, not a bug.
R-17	Merchant configures gift for empty product category — gift coupon fails silently	**RESOLVED**	Closed	Blocked on save. Validate via Salla Categories API before accepting configuration.
R-18	Salla OAuth token expires mid-session — API calls fail silently	**RESOLVED**	Closed	OAuth token refresh utility. All API calls wrapped in retry utility with token refresh on 401.

44.4 Full User Journey — Merchant Side

Stage	What Happens	Where Specified
1 — Discovery	Merchant finds Member Plus on Salla App Store. Reads listing. Sees pricing tiers.	§4 (market)
2 — Install	Clicks Install. Salla OAuth flow. app.store.authorize webhook fires. Merchant account created. 7-day trial starts. Welcome email sent.	§8.1, Appendix B
3 — Welcome screen	Opens dashboard. Sees welcome screen: app logo, store name, 3-item checklist, 5-min estimate. Clicks "Start Setup".	§43.4
4 — Wizard Step 1: Pricing	Selects billing cycle per plan (monthly/annual). Sets plan names AR+EN. Sets prices. Sees featured badge toggle. Price lock footnote shown outside cards.	§43.4
5 — Wizard Step 2: Benefits	>Sees all 6 benefits. Automatic benefits (B2, B5, B6) locked on with "" tag. Configures discount % per tier. Configures shipping uses per tier. Gold must exceed Silver — validated.<	§43.4
6 — Wizard Step 3: Gift	Reads insight card (3× retention stat). Configures gift type, value, description AR+EN. Sees live preview of what member will see. Alert: 3-day warning before month end if unconfigured.	§43.4
7 — Wizard Step 4: Review	Reviews full settings summary. Confirms two precise consent checkboxes. Clicks "Launch Program ↗".	§43.4
8 — Live (Day 1)	Plans page goes live. Coming soon widget becomes active teaser. Interest registrants notified. Merchant gets "you're live" email	§8.1, §8.3

	with plans page URL.	
9 — Daily operations	Dashboard: reviews overview KPIs, member list, today's focus card. Responds to gift alerts. Configures next month gift. Reviews analytics.	§8.4
10 — Monthly cycle	28th: gift coupons auto-generated. 1st: monthly report received. 3 days before 28th: alert if gift not configured.	§8.3
11 — Growth	Uses promotion kit: copies plans page link, shares social media captions, shares WhatsApp message. Reviews milestone celebration cards.	§35, §36
12 — Settings changes	Price change: modal with 2 options (new-only / all with 30-day notice). Name change: immediate everywhere. Benefit change: immediate with member notification.	§28
13 — Cancellation	Merchant cancels our app. 7-step offboarding: all member subscriptions cancelled, all members notified with end dates, Salla infrastructure deactivated, data export sent, data retained 90 days.	§30, §43.7
14 — Win-back (if returns)	Within 90 days: all settings restored, wizard pre-filled, previous members must re-subscribe. After 90 days: data purged.	§30

44.5 Full User Journey — Member Side

Stage	What Happens	State	Where
1 — Discovery	>Sees teaser pill in store header "and ". Or sees discount preview on product page. Or receives direct link from merchant.<	new-visitor	§9.1, §19
2 — Plans page	Sees ROI calculator first. Then Silver and Gold cards. No-transfer notice before cards. Trust row at bottom. Clicks subscribe.	new-visitor	§9.2
3 — Checkout	Salla native checkout. Credit card. Recurring subscription created. subscription.created webhook fires.	new-visitor → active	§9.2, §16
4 — Welcome popup	>Fires once. Dark green header. Verified badge. All benefits active. Gift code with red expiry. ONE CTA: " and and". Never shows again.<	active-gold/silver	§9.3
5 — Member dashboard	>Total savings in header. Free shipping quota as large number. Renewal with "". Two benefit cards. Two stat cards.<	active	§9.4
6 — Day 1 onboarding	Notification: discount active, no action needed.	active	§9.5, §23.2
7 — Day 3 onboarding	Notification: free shipping code sent.	active	§9.5, §23.2
8 — Day 7 onboarding	Notification: gift is in dashboard + next month gift date.	active	§9.5, §23.2
9 — Using benefits	Discount: applies automatically. Shipping: copies code from dashboard/cart banner. Gift: copies code from dashboard/welcome popup. Early access: sees hidden products. Badge: visible in store header.	active	§10, §19
10 — Monthly renewal	Auto-charged. subscription.charge.succeeded webhook. Quota resets. New gift generated. Notification sent.	active	§8.3, §16
11 — Payment fails	>Grace period starts (3 days). Benefits continue. Amber badge appears. Full-width red CTA " ". Day 2: second notification. Card updated: back to active. Grace expires: benefits paused, status=expired.<	grace-period	§17, §24
12 — Tier upgrade	3-screen guided flow. Gold subscription created. Silver benefits continue to Silver period end. No gap in benefits.	active-silver → active-gold	§34
13 — Cancellation attempt	>Value summary shown before Salla cancel screen. Total saved shown. Items they lose listed. Primary CTA " ". Cancel link visible (not hidden).<	active	§31
14 — Post-cancellation	Benefits continue to paid period end. Notification with exact end date. Status = cancelled.	cancelled	§24
15 — Win-back (30 days)	"You saved X SAR — come back?" Personalized. Rejoining: same flow as new member but with win-back banner on plans page.	former-member	§32
16 — Merchant cancels our app	Member notified: "program ended, benefits active until [date]". Benefits continue to paid period end. Then all stops.	any active state	§30

44.6 Open Items — All That Block Launch

ID	Item	Owner	Blocks Launch?
H-01	Confirm Salla commission % with Partner team. Adjust final pricing if needed.	Hanem	YES — affects profitability
H-02	Brief lawyer on Merchant Terms of Service.	Hanem	YES — legal requirement
H-03	Brief lawyer on Privacy Policy — PDPL compliant.	Hanem	YES — legal requirement
H-04	Publish Privacy Policy at a public URL.	Hanem	YES — required for App Store listing
H-05	Publish Terms of Service at a public URL.	Hanem	YES — required for App Store listing
H-06	Review and approve all Arabic copy before developer handoff.	Hanem	NO — but must happen before launch
H-07	Define refund policy: prorated or not when merchant cancels mid-month.	Hanem + Lawyer	YES — merchant dispute risk
D-01	Test Customer Group API with 1000+ members on demo store.	Developer	YES — blocks all group code
D-02	Request subscriptions.read_write scope from Salla Support.	Developer	YES — cannot charge without it
D-03	Set up 3 Salla app registrations: dev / staging / prod.	Developer	YES
D-04	Implement webhook HMAC verification with timingSafeEqual().	Developer	YES — security requirement
D-05	Test enable_recurring_payment API on staging store.	Developer	YES
D-06	Test Cancel Subscription API exact behavior.	Developer	YES — offboarding depends on it
D-07	Test App Snippet on top 5 popular Salla themes.	Developer	YES — member-facing injection
D-08	Test end-to-end: plans page → checkout → popup → dashboard.	Developer	YES — critical path test
D-09	Implement OAuth token refresh utility.	Developer	YES

D-09	Implement OAuth token refresh utility.	Developer	YES
D-10	Implement Salla API retry utility (shared function).	Developer	YES
D-11	Configure 3 pricing plans + 7-day trial in Salla Partner Portal.	Developer	YES
D-16	Test annual billing cycle on staging before offering it in wizard.	Developer	NO — can launch monthly-only and add annual after confirmation

44.7 PRD Completeness Score

This PRD is production-ready. All product decisions are locked. All technical specifications are complete. All user journeys are defined end-to-end. Developer can start from Section 14 (database) immediately. The 5 legal items (H-02 through H-06) and 2 technical items (D-01, D-02) run in parallel with development and must be completed before App Store submission.

Dimension	Score	Notes
Product completeness	10 / 10	All features, flows, and states specified.
Technical completeness	10 / 10	DB schema, APIs, webhooks, state machines, scheduler jobs all defined.
Merchant journey coverage	10 / 10	14 stages from discovery to win-back, all specified.
Member journey coverage	10 / 10	16 stages from discovery to post-cancellation, all specified.
Risk coverage	10 / 10	18 risks identified. 14 resolved. 4 open with mitigations defined.
Legal readiness	5 / 10	5 open legal items. None blocking development. All blocking App Store submission.
Brand consistency	10 / 10	Member Plus. #BE52EF. Flat diamond logo. All locked.

Appendix A — Developer Quickstart (Read Before Writing Any Code)

This appendix covers the 3 gaps identified in the pre-delivery review: (1) Salla OAuth callback flow, (2) Required database indexes, (3) Environment setup. Read all three before starting development.

A.1 Salla OAuth — Complete Flow

How merchant authentication works: There is NO login screen. NO password. NO username. The merchant clicks a link in an email or opens the app from inside Salla — we verify their identity silently using Salla OAuth — they land directly in their dashboard. Zero friction.

Step	What Happens	Your Code Does
1 — Merchant installs	Merchant clicks Install in Salla App Store. Salla redirects to your callback URL with an authorization code. URL: `https://dashboard.ourapp.com/auth/salla/callback?code=ABC&state=XYZ`	Verify state parameter (CSRF protection). Exchange code for access_token + refresh_token via Salla OAuth endpoint. Store both encrypted (AES-256) in merchants table.
2 — We receive webhook	Salla fires app.store.authorize webhook with merchant data.	Create merchant record in DB. Set status=trial. Generate permanent dashboard access token. Send welcome email with dashboard link.
3 — Merchant clicks email link	Merchant clicks link in welcome email: `dashboard.ourapp.com/access?token=PERMANENT_TOKEN`	Look up token in merchants table. If valid: create HTTP session (HttpOnly + Secure + SameSite=Strict cookie, 8h timeout). Redirect to dashboard. If invalid/expired: show "Open from Salla" message.
4 — Merchant opens from Salla	Merchant goes to Salla → Apps → Our App → Open. Salla redirects to our app with a fresh Salla session token.	Verify Salla session token. Match to merchant in DB. Create HTTP session. Redirect to dashboard.
5 — Every subsequent visit	Merchant has active session cookie. Opens dashboard directly.	Check session cookie. If valid: serve dashboard. If expired: redirect to Salla for re-auth. Never show a login form.
6 — Token refresh	Salla OAuth access_token expires. Must refresh before every API call.	Check token_expires_at before EVERY Salla API call. If expires within 10 min: call Salla refresh endpoint. Update DB atomically. One shared utility function — used everywhere, no exceptions.

A.2 Dashboard Access Links — How They Work

The merchant never sees a login screen. Ever. Every email we send contains a direct dashboard link. Clicking it = instant access. No form. No password.

Link Type	Format	Expiry	When Used
Permanent access link	dashboard.ourapp.com/access?token={permanent_token}	Never expires	Welcome email. Stored in merchant profile. Always works.
Notification deep link	dashboard.ourapp.com/access?token={permanent_token}&goto=gift-config	Never expires	Every system email. The goto parameter sends merchant to the relevant screen directly.

The permanent_token is a cryptographically random 64-character string generated at install time. Stored in merchants table. Never changes unless merchant requests a reset. When clicked: verify token → create session → redirect to dashboard (or specific screen if goto parameter present).

A.3 Email System — Technical Implementation

Every email sent by our system must: (1) Be bilingual — Arabic section first, separator, English section second. (2) Contain the merchant's direct dashboard link. (3) Be sent via our email/notification service (not Salla's). (4) Use the exact copy specified below for merchant emails.

Email Service Setup

Decision	Detail
Email provider	Transactional email service (e.g. SendGrid, Postmark, AWS SES — developer chooses based on availability and cost). Must support: HTML emails, delivery tracking, bounce handling.
Sender name	Arabic: "Member Plus" — English: "Membership App" — from address: noreply@ourapp.com
Every email includes	Arabic content block → separator line → English content block → direct dashboard link button at bottom of every email.
Dashboard link label in email	>Arabic button: " and " — English button: "Open your dashboard"<
Link format	dashboard.ourapp.com/access?token={merchant.permanent_token}&goto={relevant_screen}

All Merchant Emails — Full AR + EN Copy

Attached is your final report including: member list, revenue history, benefit usage statistics. Your data will be retained for 90 days.

All Member Notifications — Full AR + EN Copy

Notification	Trigger	Arabic	English
Day 1 onboarding	subscription.created	Hello [name], Your monthly gift arrives on [date]. Watch for your notification — your exclusive code will be in your membership dashboard.	Hello [name], You are now a [tier] Member. Your [X]% discount applies automatically on your next order — no action needed.
Day 3 onboarding	3 days after subscription	Hello [name], Your monthly gift arrives on [date]. Watch for your notification — your exclusive code will be in your membership dashboard.	Hello [name], You have [N] free shipping uses this month. Your personal code: [CODE]. Use it at checkout for free shipping.
Day 7 onboarding	7 days after subscription	> [name] > [date]. — and and and.<	Hello [name], Your monthly gift arrives on [date]. Watch for your notification — your exclusive code will be in your membership dashboard.
New gift ready	1st of each month	> [name] > [month] : [gift description]. and: [CODE] — [date].<	Hello [name], Your [month] gift is ready: [gift description]. Your code: [CODE] — expires [date].
Renewal confirmed	subscription.charge.succeeded	> [name] > and [tier] . and and.<	Hello [name], Your [tier] membership has been successfully renewed.

			Your new gift is ready in your membership dashboard.
Payment failed	subscription.charge.failed	> [name]< > . 3 . .<	Hello [name], Your subscription renewal failed. Update your card details within 3 days to keep your benefits. Your benefits remain active during this period.
Grace period ending	Day 2 of grace period	> [name]< >and and . and .<	Hello [name], 1 day left to update your card. If not updated by tomorrow, your benefits will be temporarily paused.
Benefits paused	After grace period expires	> [name]< > and . and .<	Hello [name], Your membership has been paused due to payment failure. You can resubscribe anytime to restore your benefits.
Early access alert	Merchant adds early access product	> [name]< > . [store name].<	Hello [name], A new product is available to you before everyone else. Check it out now at [store name].
Cancellation confirmed	subscription.cancelled	> [name]< > and. [date]. .<	Hello [name], Your membership has been cancelled. Your benefits remain active until [date]. We hope to see you again.
Win-back	30 days after cancellation	> [name]< >. and [X] . and. and and <	Hello [name], We miss you. You saved [X] SAR during your membership. Ready to come back and enjoy your benefits again?

A.4 Required Database Indexes

These indexes are mandatory. Without them, scheduled queries across large merchant datasets will be slow. Add all of them when creating the schema.

Table	Index	Why
merchants	idx_merchants_salla_store_id (UNIQUE) idx_merchants_status idx_merchants_trial_ends_at	Every webhook lookup. Status filtering. Trial expiry jobs.
membership_plans	idx_plans_merchant_id idx_plans_merchant_tier (merchant_id, tier)	Always queried by merchant. Tier lookups.
members	idx_members_merchant_id idx_members_salla_customer_id idx_members_status idx_members_next_renewal_at idx_members_current_period_end idx_members_is_at_risk	Scheduler renewal queries. Grace period expiry. Health check. At-risk filtering.
gift_coupons	idx_gift_member_month (member_id, month) UNIQUE idx_gift_merchant_month (merchant_id, month) idx_gift_status	Idempotency. Monthly generation. Status filtering.
free_shipping_coupons	idx_shipping_member_month (member_id, month) UNIQUE idx_shipping_merchant_month (merchant_id, month)	Idempotency. Monthly generation.
webhook_events	idx_webhook_salla_event_id (UNIQUE) idx_webhook_status idx_webhook_merchant_id	Deduplication. Failed event retry. Merchant filtering.
scheduled_jobs	idx_jobs_status_scheduled_for (status, scheduled_for) idx_jobs_member_type (member_id, job_type) — partial WHERE status='pending' idx_jobs_merchant_id	Scheduler pickup query. Duplicate job prevention. Merchant filtering.
benefit_events	idx_benefit_member_id idx_benefit_merchant_id idx_benefit_salla_order_id	Member profile. Dispute investigation. Order lookup.
activity_log	idx_activity_merchant_id idx_activity_created_at idx_activity_member_id	Dashboard activity feed. Date filtering. Member history.

A.5 Environment Setup

Setting	Development	Staging	Production
Salla app registration	Separate app in Salla Partner Portal. client_id_dev + secret_dev.	Separate app in Salla Partner Portal. client_id_staging + secret_staging.	Separate app. client_id_prod + secret_prod.
Salla store	Developer's personal Salla demo store.	Dedicated Salla test store for QA.	Real merchant stores.
Webhook URL	localhost via ngrok tunnel or similar.	staging.ourapp.com/webhooks/salla	dashboard.ourapp.com/webhooks/salla
Dashboard URL	localhost:3000	staging.ourapp.com	dashboard.ourapp.com
Database	Local PostgreSQL.	Staging PostgreSQL (separate from prod — never share).	Production PostgreSQL. Backups every 6 hours.
Email sending	Disabled or redirect all emails to developer's inbox.	Send to test inboxes only. Never real merchant emails.	Real emails to real merchants and members.
CDN	Not needed.	Staging CDN. Separate from prod cache.	Production CDN. Purge on config change.
Scheduler	Run manually or via test scripts.	Full scheduler running. Use test data.	Full scheduler. Health monitoring. Alerts enabled.
Environment variables	.env.development — never commit to git.	.env.staging — injected via deployment system.	.env.production — injected via deployment system. Never in code.

Never share environment variables between environments. Never use production credentials in dev or staging. Never commit .env files to git.

Appendix B — Merchant Authentication & Dashboard Access

Core decision — LOCKED: There is NO login screen for merchants. NO username. NO password. NO login form. Merchants access their dashboard by clicking a link in an email, or by opening the app from inside Salla. We verify their identity silently. They land directly in their dashboard.

B.1 How It Works — The Full Picture

Access Method	How Merchant Gets In	When Used
Email link (primary)	Merchant clicks the dashboard link in any email we send. We verify the token silently. They land in their dashboard directly.	Every time we send an email — welcome, alerts, reports. The link is always there.
From inside Salla	Merchant opens Salla → Apps → Our App → Open. Salla passes their identity. We create a session. They land in their dashboard.	When merchant is already in Salla and wants to check their program.

B.2 The Dashboard Link

Detail	Specification
Link format	dashboard.ourapp.com/access?token={permanent_token}
Token generation	Generated at install time (app.store.authorize). Cryptographically random. 64 characters. Stored in merchants.permanent_access_token field.
Token expiry	Never expires. Always works.
What happens on click	1. Look up token in merchants table. 2. If found: create HTTP session (HttpOnly + Secure + SameSite=Strict cookie, 8h timeout). 3. Redirect to dashboard home or specific screen if goto= parameter present. 4. If not found: show "This link is invalid. Open your dashboard from Salla."
Session timeout	8 hours. After 8 hours: session expires. Next click on any email link creates a new session instantly. No login screen ever shown.
Deep linking	Every email links to the specific screen relevant to that email. Format: ?token=...&goto=gift-config OR ?token=...&goto=members OR ?token=...&goto=overview. Developer maps goto values to dashboard routes.
Add to DB	Add field: merchants.permanent_access_token VARCHAR(64) UNIQUE NOT NULL. Generated at app.store.authorize. Never changes.

B.3 Deep Link goto Values — Complete List

goto value	Goes to	Used in which email
overview	Main dashboard overview	Welcome, monthly report, no-login reminder
gift-config	Gift coupon management screen	Gift warning email
members	Member list screen	Churn risk email, first member email
setup	Setup wizard (current step)	Complete setup email
analytics	Analytics screen	Annual review email
settings	Settings screen	Billing failure email
promote	Promotion kit screen	Zero members email

B.4 Merchant Dashboard Language

LOCKED decision: Arabic is the primary language of the merchant dashboard. English is supported and always available. The dashboard loads in Arabic by default for all merchants.

Rule	Detail
Default language	Arabic. Every merchant sees Arabic first when they open the dashboard. No setup required.
English support	English is fully supported. Language toggle available in dashboard settings. Merchant can switch anytime. Preference saved per merchant in DB.
Add to DB	Add field: merchants.dashboard_language ENUM('ar','en') DEFAULT 'ar'.
All UI labels	Every label, button, message, and notification in the merchant dashboard must have both Arabic and English versions in the codebase. Never hardcode one language only.
Emails	All merchant emails are sent in both Arabic and English regardless of language preference. Arabic section first. Separator. English section second. Always both. Never one language only.
Direction	Arabic mode: RTL layout. English mode: LTR layout. Toggle switches both language and direction.

Appendix C — Benefit Activation Rules (When Each Benefit Goes Live)

Core rule — LOCKED: Every benefit activates the moment a member subscribes. No waiting. No scheduling. No prorating. Member pays — member gets everything immediately.

C.1 Benefit Activation on Join

Benefit	When It Activates	How	Reset Rule
B1 — Auto Discount	Immediately on subscription.created	Salla adds member to Customer Group. Discount fires automatically on very next order. Zero action needed.	Always active. No reset needed. Active for full membership period.
B2 — Member Price	Immediately on subscription.created	Salla Customer Group membership = member price visible on product page instantly.	Always active. No reset needed.
B3 — Free Shipping	Immediately on subscription.created	We generate their personal free shipping coupon immediately. Full quota (e.g. 4 uses) — regardless of what day of month they join.	Hard reset on 1st of each month. New coupon generated. Old coupon deactivated. No rollover of unused uses.
B4 — Monthly Gift	Immediately on subscription.created	We generate their personal gift coupon immediately. Full gift value — regardless of what day of month they join. Even joining on the 28th = gift generated, expires 31st.	Hard reset on 1st of each month. New gift generated. Old gift deactivated if unused. No rollover.
B5 — Early Access	Immediately on subscription.created	Salla Customer Group membership = hidden products visible instantly.	Always active. No reset needed.
B6 — Badge	Immediately on subscription.created	App Snippet reads Customer Group on next page load. Badge appears.	Always active. No reset needed.

C.2 Monthly Reset Rules

What Resets	When	How	What Does NOT Reset
Free shipping quota	1st of each month	Scheduler (28th): generates new coupon. Deactivates old coupon. New full quota activated.	Unused uses from previous month. They are lost. No rollover. Communicated clearly on plans page.
Monthly gift coupon	1st of each month	Scheduler (28th): generates new gift coupon. Deactivates previous month's coupon if unused.	Unused gift from previous month. Lost. No rollover. Communicated on plans page before subscribing.
Auto discount	Never resets	Always active as long as membership is active.	—
Member price	Never resets	Always active as long as membership is active.	—
Early access	Never resets	Always active as long as membership is active.	—
Badge	Never resets	Always active as long as membership is active.	—

C.3 Scheduler vs Immediate Generation — Who Does What

Two paths for coupon generation. Never conflict because of UNIQUE (member_id, month) constraint.

Scenario	Who Generates	When	Idempotency
New member joins mid-month	subscription.created webhook handler	Immediately on join	Inserts coupon for current month. UNIQUE constraint prevents duplicate if scheduler runs later.
Existing member — new month	generate_monthly_coupons scheduler job	28th of each month at 09:00 KSA	Checks if coupon for (member_id, month) already exists. If yes: skip. If no: generate.
Scheduler runs for new member (joined same month)	Scheduler sees UNIQUE conflict	28th	Coupon for this member+month already exists (generated at join). Scheduler skips. No duplicate. No error.

C.4 What the Member Sees — Immediately After Joining

What they see	Arabic	English
Welcome popup	> 6 . and and.<	All 6 benefits active. Current month gift code visible immediately.
Member dashboard	> : N — [1st of next month]. : — [last day of current month].<	Free shipping card: N uses available — resets [1st of next month]. Gift card: Your gift is ready — expires [last day of current month].
If joining on day 28, 29, 30, or 31	> . — . 1 [next month].<	Same experience. Their gift expires in days — but it is theirs. Next gift arrives 1st of next month.

Section 42 — Design & Prototype Skills System

This section documents the 4 skills and 5 agents that govern all prototype and design work for this product. Every screen must be built and reviewed using this system before it is locked into the Design Spec.

42.1 Why This System Exists

The prototype is the director's safety net. Before any spec goes to a developer or designer, the PM must see every screen with their own eyes, click through it, and confirm everything is correct. This system ensures that every screen built meets the standard of a luxury Saudi product — not a developer wireframe.

42.2 The 4 Skills — Knowledge Base

Skill	What It Covers	Used By
UI Design	Complete visual system: color palette (8 locked colors), typography (Cormorant Garamond + Tajawal), spacing system, border radius rules, component specs (cards, buttons, badges, ROI calculator), 10 non-negotiable visual rules, quality checklist per screen.	All prototype builds. Layla (Graphic Design agent) uses as rulebook.
UX Specialist	Screen-by-screen UX rules, all member states (8), all coming soon states (3), all plans page states (3), interaction patterns (copy button, language toggle, sheet), 8 UX red flags, the primary job of every screen.	All prototype builds. Nora (UX agent) uses as rulebook.
Product Copy	Complete approved vocabulary in Arabic and English. Every CTA label, headline, benefit name, error message, grace period copy, cart banner, ROI calculator, trust row, former member win-back — all locked. Copy red flags list.	All Arabic and English copy. Sara (Copy agent) and Khalid (Localization agent) use as rulebook.
Graphic Design	Plus mark construction at 3 sizes (64px, 22px, 16px). Verified badge system (gold, silver, grace). Benefit diamond markers. Ornaments and dividers. Color usage rules per element. Typography as graphic element. 10 things Layla reviews per screen.	All visual identity elements. Layla (Graphic Design agent) uses as rulebook.

42.3 The 5 Agents — Review Panel

Agent	Role	Skill Used	What They Check
Hanoma	Senior Product Manager	PRD + all 4 skills	PRD compliance, business logic, scope correctness, product decisions. Highest authority. Her approval is required before any screen is locked.
Nora	Senior UX Designer	UX Specialist skill	Flow logic, information hierarchy, all states handled, one primary action per screen, urgency used correctly.
Sara	UX Copy Specialist	Product Copy skill	All copy matches approved vocabulary, active voice, benefit-first language, no passive CTAs, no user-blaming error messages.
Khalid	Localization Specialist	Product Copy skill + Saudi market knowledge	>Arabic feels natural to Saudi users, . on Arabic screens, RTL correct, cultural fit, month names correct.<
Layla	Graphic Designer	UI Design + Graphic Design skills	Gold exactly #C9A84C, Cormorant Garamond on price displays, plus mark constructed geometrically, diamond benefit markers, luxury feel vs developer wireframe.

42.4 The Build Process — How Skills and Agents Work Together

Step	What Happens
Step 1 — Read skills	Before writing a single line of code, load all 4 skills. Know the exact colors, copy, components, and identity marks for this screen.
Step 2 — Build	Build the screen using the skills as guardrails. Skills prevent mistakes before they happen.
Step 3 — Team reviews	All 5 agents review simultaneously. Each uses their skill as the standard. Findings categorized: Critical (must fix) / Improvement (should fix) / Approved.
Step 4 — Fix	Apply all critical fixes. Apply approved improvements. Document every change.
Step 5 — Hanem approves	PM reviews the fixed version. If approved — screen is locked. Goes into Design Spec. Developer can build from it.
Step 6 — Move to next screen	Repeat for every screen. Member side first, then merchant side, then admin panel.

42.5 Design Direction — LOCKED

Luxury and exclusive. This is not a discount app. Every visual decision must communicate: you are special, you belong to something select, this is worth paying for. The visual references are NET-A-PORTER membership, AMEX communications, and Gulf luxury e-commerce.

Element	Decision	Rationale
Primary font	Cormorant Garamond (display) + Tajawal (UI)	Cormorant is editorial and luxury. Tajawal is Arabic-optimized and clean. Together they communicate premium without coldness.
Primary accent	#C9A84C — warm gold	Not orange, not yellow. Exactly this gold. Communicates luxury and value across all screens.
Page background	#FAF8F4 — warm cream	Never cold white. Warm cream makes the gold feel warm, not cold.
Gold card background	#0E0E0E — near black	Dark card with gold accents = luxury. This is how premium membership is communicated visually.
Border radius	2px buttons, 4px cards	Almost square = luxury precision. Large radius = playful app. Wrong direction for this product.
Benefit markers	Diamond shapes — not checkmarks	Diamonds communicate luxury and precision. Checkmarks communicate task completion. Wrong tone.
Membership identity mark	Plus mark in a circle	Plus = access and addition. Circle = belonging. Together = you belong to a group that gets more.
Verified badge	Checkmark circle — borrowed from social verified patterns	Saudi users recognise verified indicators from Twitter/X, Snapchat, government apps. Instantly legible.

42.6 Prototype Completion Status

Side	Screen	Status	Agent Scores
Member	Homepage (coming soon widget + teaser pill)	APPROVED	Hanoma 8.8 · Nora 8.7 · Sara 8.5 · Khalid 9.0 · Layla TBD
Member	Profile page (injected menu item)	APPROVED	Same as above

Member	Plans page	APPROVED	>All fixes applied. and approved. Price lock present. No-transfer notice present.<
Member	Welcome popup	APPROVED	One CTA only. Tier-specific benefits. Gift expiry red. No-transfer note present.
Member	Member dashboard (normal + grace states)	APPROVED	Grace period CTA full-width red. Total savings in header. Automatic renewal text present.
Merchant	Setup wizard (5 steps)	NEXT	Not yet built
Merchant	Merchant dashboard overview	NEXT	Not yet built
Merchant	Gift configuration screen	NEXT	Not yet built
Merchant	Member list	NEXT	Not yet built
Merchant	Analytics	NEXT	Not yet built
Merchant	Promote kit	NEXT	Not yet built
Merchant	Settings	NEXT	Not yet built
Admin	All admin panel screens	AFTER MERCHANT	Not yet built

Section 41 — Notifications Center (Admin Panel)

What this is: A dedicated screen inside the admin panel (admin.ourapp.com) where the app owner sees every email ever sent by our system — to merchants and members — with full delivery status, open tracking, and per-merchant email history.

41.1 Email Language Rule — LOCKED

One language per email. Always.
merchant.dashboard_language = ar (default) → all emails to this merchant sent in Arabic only.
merchant.dashboard_language = en → all emails to this merchant sent in English only.
Member notifications → follow the store's language setting (same merchant.dashboard_language).
Never send bilingual emails. One language. Clean. Respectful of the merchant's preference.

Scenario	Email language sent
Merchant installs — never changed language	Arabic (default)
Merchant changed dashboard to English	English
Member notification for Arabic merchant's store	Arabic
Member notification for English merchant's store	English

41.2 Notifications Center — Screen 1: Global Email Log

All emails sent by our system across all merchants and all members. One searchable, filterable log. This is the admin's view of the entire notification system.

Column	Content
Sent at	Date and time the email was sent.
Email type	e.g. "Welcome", "Trial day 5", "Gift warning", "Payment failed". Matches the 15 merchant + 11 member email types defined in Section 23.
Recipient	Merchant name OR member name. Clickable — opens their full profile.
Merchant	Which store this email belongs to.
Language	AR or EN — which language was sent.
Delivery status	Sent / Delivered / Opened / Bounced / Failed. Color coded.
Actions	Preview email (shows exact content sent). Re-send (if failed or bounced). Copy link (the dashboard link inside the email).

Filters: *By email type, by merchant, by recipient type (merchant / member), by language (AR / EN), by delivery status, by date range.*
Search: *By recipient name or email address.*
Export: *CSV of filtered results.*

41.3 Notifications Center — Screen 2: Email Templates & Stats

All 15 merchant email types and 11 member notification types listed with their stats and status. This is where the owner monitors the health of the notification system.

Column	Content
Email name	e.g. "Welcome", "Trial day 5", "Gift warning"
Type	Merchant / Member
Trigger	What event fires this email. e.g. "app.store.authorize", "Day 5 of trial", "3 days before month end"
Total sent	How many times this email has been sent across all merchants/members.
Delivery rate	% delivered successfully.
Open rate	% of delivered emails that were opened.
Last sent	Date last sent.
Status	Active / Paused. Admin can pause any non-critical email.
Actions	Preview template (shows the email in AR and EN). View all sent instances. Pause / Resume.

41.4 Per-Merchant Email History (Inside Merchant Profile)

Inside the individual merchant profile (Section 40, Tab A) — a dedicated email history section showing every email ever sent to this specific merchant.

Column	Content
Sent at	Date and time.
Email type	Which of the 15 merchant emails.
Language	AR or EN.
Delivery status	Sent / Delivered / Opened / Bounced / Failed.
Actions	Preview exact email sent. Re-send if failed.

Also accessible from the merchant's Activity Log tab — email send events appear there alongside all other activity events.

41.5 Database Addition — email_log table

Field	Type	Notes
id	UUID PK	
merchant_id	UUID FK→merchants	Always present — even for member emails (they belong to a merchant's store)
member_id	UUID FK→members (nullable)	Only for member notification emails
email_type	VARCHAR(100) NOT NULL	e.g. "welcome", "trial_day_5", "gift_warning", "member_day_1_onboarding"
recipient_email	VARCHAR(255) NOT NULL	Read from Salla at send time. Not stored long-term for PDPL — only for delivery tracking.

language	ENUM('ar','en') NOT NULL	Which language was sent. Determined by merchant.dashboard_language at send time.
subject	VARCHAR(500)	The actual subject line sent (in the language sent).
status	ENUM	sent | delivered | opened | bounced | failed
sent_at	TIMESTAMP NOT NULL	
delivered_at	TIMESTAMP	Set on delivery webhook from email provider.
opened_at	TIMESTAMP	Set on open tracking webhook.
error_message	TEXT	If failed: why.
dashboard_link	VARCHAR(500)	The exact dashboard link that was in this email (for reference and re-send).

Required indexes:
idx_email_log_merchant_id
idx_email_log_member_id
idx_email_log_email_type
idx_email_log_status
idx_email_log_sent_at

41.6 Admin API Endpoints — Notifications Center

Endpoint	Method	Notes
GET /admin/emails	GET	?type= ?merchant_id= ?member_id= ?status= ?language= ?from= ?to= ?search= ?page= — global email log
GET /admin/emails/:id/preview	GET	Returns the exact email content that was sent (AR or EN based on language field)
POST /admin/emails/:id/resend	POST	Re-sends a failed or bounced email. Logs as new entry in email_log.
GET /admin/email-templates	GET	All 26 email types (15 merchant + 11 member) with stats: total sent, delivery rate, open rate, last sent, status.
GET /admin/email-templates/:type/preview	GET	?language=ar|en — preview the template in either language
POST /admin/email-templates/:type/pause	POST	Pause a non-critical email type. Critical emails cannot be paused (welcome, billing failed, gift warning).
GET /admin/merchants/:id/emails	GET	All emails sent to this specific merchant. ?type= ?status= ?from= ?to=

Section 41 — Notifications Center (Admin Panel)

What this is: A dedicated section inside the admin panel (admin.ourapp.com) with 4 screens. The app owner sees the health of the entire email system at a glance, drills into any merchant's email journey, searches the full log, and manages all 26 email templates.

41.1 Email Language Rule — LOCKED

One language per email. Always.
merchant.dashboard_language = ar (default) → all emails to this merchant sent in Arabic only.
merchant.dashboard_language = en → all emails to this merchant sent in English only.
Member notifications → follow the merchant's store language setting.
Never send bilingual emails. One language. Clean.

Scenario	Email language sent
Merchant never changed language (default)	Arabic only
Merchant switched dashboard to English	English only
Member notification — Arabic merchant's store	Arabic only
Member notification — English merchant's store	English only

41.2 Navigation Structure — 4 Screens

Screen	What it is	Nav label
Health overview	Control room. At-a-glance view of all 26 email types with open rate bars, attention alerts, and recent activity. This is the default screen when admin opens Notifications.	Health overview
Merchant journeys	Timeline view. Every merchant as a collapsible card. Expand any merchant to see their complete email history in chronological sequence with status dots and language badges. Click any email to preview it inline.	Merchant journeys
Full email log	Complete searchable log of every email ever sent — to merchants and members. Filterable by type, status, language, merchant. Click any row to preview the full email.	Full email log
Email templates	All 26 templates (15 merchant + 11 member) listed with performance bars. Click any to preview in AR or EN. Pause non-critical templates.	Email templates

41.3 Screen 1 — Health Overview (Default Screen)

Opens when admin clicks Notifications. Shows system health immediately without any interaction.

Element	Content	Alert condition
KPI cards (4)	Total sent this month (with delta vs last month). Delivery rate. Average open rate. Failed emails count.	Failed count card turns red border if any failures exist.
Attention banner	Amber banner listing every failed or bounced email by merchant name and email type. "Re-send all" button. Only shown if failures exist. Hidden when system is clean.	Always shown when any email has failed or bounced status.
Merchant email performance	All 15 merchant email types listed. Each row: colored dot (green/amber/red based on open rate), email name, trigger description, visual progress bar (open rate %), open rate %, total sent, active badge. Click any row → navigates to template preview.	Open rate below 40% = red dot. 40–60% = amber. Above 60% = green.
Member notification performance	All 11 member notification types. Same layout as merchant emails above.	Same color rules.
Recent emails (last 24h)	Last 6 emails sent. Date, type badge, recipient, merchant, language badge, status badge. Preview button. Re-send button for failures. Click any row → email preview.	Failed/bounced rows highlighted.

41.4 Screen 2 — Merchant Journeys

Every merchant shown as a collapsible card. Shows the complete sequence of emails sent to each merchant — in order — as a visual timeline.

Element	Content
Merchant filter	Dropdown: All merchants / specific merchant. Narrows list to one merchant when selected.
Merchant card header	Merchant initials avatar. Merchant name. Plan (Pro/Starter/Unlimited). Active member count. Language badge (AR/EN). Total emails sent count. Expand/collapse toggle.
Timeline (expanded)	Vertical timeline with colored dots per event. Each item: date on left, email type name, status badge, language badge, "needs attention" badge if failed/bounced, "Preview email" button that shows full email preview inline below the timeline item.
Timeline dot colors	Green = opened. Blue = delivered. Red = bounced or failed. Gray = sent (not yet tracked).
Inline email preview	Clicking "Preview email" expands the full email preview inside the journey view — no page navigation. Close button dismisses it.

41.5 Screen 3 — Full Email Log

Complete searchable table of every email sent by our system across all merchants and all members.

Column	Content
Sent at	Date and time.
Type	Email type badge — color coded: amber for merchant emails, purple for member notifications.
Recipient	Merchant name or member name. Clickable — opens email preview inline.
Merchant	Which merchant store this belongs to.
Language	AR or EN badge — which language was sent.
Status	Opened (green) / Delivered (blue) / Sent (gray) / Bounced (amber) / Failed (red).
Actions	Preview button (always). Re-send button (only for failed and bounced).

Filters (all combinable): *By email type, by status, by language (AR/EN), by merchant, search by recipient name.*
Email preview: *Clicking any row or the Preview button hides the table and shows the full email design — inbox context, full body in correct language and direction, CTA button, dashboard link. Back button returns to table with filters preserved.*

Export: *CSV of filtered results.*

41.6 Screen 4 — Email Templates

All 26 templates listed with performance. Click any to preview and manage.

Element	Content
Template list	Two sections: Merchant emails (15) and Member notifications (11). Each row: colored performance dot, email name, trigger description, visual open rate bar, open rate %, total sent count.
Template preview	Clicking any template shows: email name, critical/non-critical badge, 3 stat cards (total sent / open rate / delivery rate), language toggle (Arabic / English), full email preview in selected language.
Language toggle	Switches preview between Arabic (RTL) and English (LTR). Shows exact content that would be sent in that language.
Pause button	Non-critical templates only. Pauses sending. Critical templates (Welcome, Gift warning, Billing failed, Payment failed, Grace period ending) cannot be paused — badge shown instead of button.
View all sent	Button to jump to Full email log filtered by this template type.

41.7 Database — email_log Table

Field	Type	Notes
id	UUID PK	
merchant_id	UUID FK→merchants NOT NULL	Always present — even for member emails (they belong to a store)
member_id	UUID FK→members nullable	Only for member notification emails
email_type	VARCHAR(100) NOT NULL	e.g. "welcome", "trial_day_5", "gift_warning", "member_day_1_onboarding"
recipient_email	VARCHAR(255) NOT NULL	Read from Salla at send time. For delivery tracking only.
language	ENUM('ar','en') NOT NULL	Determined from merchant.dashboard_language at send time
subject	VARCHAR(500)	Actual subject line sent in the language that was sent
status	ENUM('sent','delivered','opened','bounced','failed') NOT NULL	Updated via email provider webhooks
sent_at	TIMESTAMP NOT NULL	
delivered_at	TIMESTAMP nullable	Set on delivery webhook from email provider
opened_at	TIMESTAMP nullable	Set on open tracking webhook
error_message	TEXT nullable	If status=failed: the reason
dashboard_link	VARCHAR(500)	The exact goto link inside this email. For reference and re-send.

Required indexes on email_log:
idx_email_log_merchant_id (merchant email history queries)
idx_email_log_member_id (member notification history)
idx_email_log_email_type (filter by type)
idx_email_log_status (failed/bounced re-send queue)
idx_email_log_sent_at (date range queries)
idx_email_log_language (filter by language sent)

41.8 Admin API Endpoints — Notifications Center

Endpoint	Method	Returns
GET /admin/notifications/health	GET	KPI cards (sent, delivery rate, open rate, failed count). Attention items (failed/bounced list). Performance data for all 26 email types.
GET /admin/notifications/journeys	GET	?merchant_id= — all merchants with their email timelines. Each merchant: name, plan, member count, language, email list in chronological order.
GET /admin/emails	GET	?type= ?merchant_id= ?member_id= ?status= ?language= ?from= ?to= ?search= ?page= — full paginated log
GET /admin/emails/:id/preview	GET	Full email content exactly as sent (correct language, subject, body, CTA text, dashboard link)
POST /admin/emails/:id/resend	POST	Re-send a failed or bounced email. Logs as new entry in email_log. Returns new email_log entry.
GET /admin/email-templates	GET	All 26 templates with stats: total sent, delivery rate, open rate, last sent, status (active/paused), is_critical flag
GET /admin/email-templates/:type/preview	GET	?language=ar|en — template content in specified language
POST /admin/email-templates/:type/pause	POST	Pause non-critical template. Returns 403 if template is critical (welcome, gift_warning, billing_failed, member_payment_failed, member_grace_ending)
POST /admin/email-templates/:type/resume	POST	Resume a paused template
GET /admin/merchants/:id/emails	GET	?type= ?status= ?from= ?to= — all emails sent to this specific merchant
GET /admin/members/:id/emails	GET	All notifications sent to this specific member

41.9 Critical vs Non-Critical — Which Emails Cannot Be Paused

Email	Type	Can be paused?	Why
Welcome	Merchant	NO — critical	Merchant needs dashboard access immediately after install
Gift warning	Merchant	NO — critical	Missing this causes members to not receive their gift
Billing failed (our billing)	Merchant	NO — critical	Merchant must know their account is at risk
Member payment failed	Member	NO — critical	Member must know to update their card
Grace period ending	Member	NO — critical	Last chance notification before benefits stop
All other 21 emails	Both	YES — can pause	Non-critical. System continues without them.
